## One Simple Upgrade Brings You a Whole New World of Options!

Now, with a simple plug-in upgrade, you can give your Yamaha Disklavier piano many of the same advanced capabilities as the exciting new Disklavier Mark III Series! The new DCD1 Disklavier CD Player turns your Disklavier or other MIDI-equipped Yamaha piano<sup>1</sup> into a full-fledged musical entertainment system, ready to provide a superb selection of piano and ensemble concerts—complete with high-fidelity vocal and instrumental tracks<sup>2</sup>—anytime you like.

*Full functionality depends on the host piano. Please refer to Notes for more complete information.*

### Experience outstanding musical entertainment

With the DCD1, you can listen to some of the world's top artists performing right in your own home.

### Access a fast-growing selection of new audio/MIDI CDs<sup>3</sup>

The DCD1 is compatible with a full spectrum of CD performance software, available from Yamaha and other producers. Whether your taste runs to ballads or baroque, show tunes or sonatas, chamber music, big bands or popular hits, you'll find a wide range of musical entertainment choices.

### Enjoy piano concerts complete with instruments and vocals<sup>2</sup>

Audio/MIDI CDs can also provide synchronized vocal and instrumental audio tracks. This means that you can listen to some of your favorite vocalists and groups

playing and singing right along with your piano, with CD-quality sound and the convenience of conventional audio discs.

### Even play your favorite music CDs

You can also use the DCD1 to listen to your music CDs. Depending on your piano<sup>4</sup>, you can listen through headphones, through the piano's internal speakers or your own amplified speakers. It's like having another audio system, and ideal when you want to play along.

### Quick and easy plug-in installation

The DCD1 is as simple to set up and use as conventional audio equipment. Just place it wherever it's most convenient, then connect a few cables, select your piano type, plug it in and turn it on.

#### NOTES:

1. The DCD1 is designed for use mainly with the Yamaha Disklavier Mark II XG and earlier Disklavier models.
2. Instrumental and vocal reproduction requires certain components, already equipped on some Yamaha piano models and connectable as external equipment on others.
  - Reproduction of audio tracks requires an amplified speaker system or headphone capability.
  - Reproduction of MIDI instrumental tracks requires a MIDI tone generator.
3. Software availability may be limited in some countries.
4. Playback functionality varies according to the host piano.
  - Yamaha Disklavier pianos reproduce piano tones on the strings of the piano, requiring headphones or external audio equipment for ensemble sound reproduction.
  - Yamaha Disklavier Silent/MIDIPIanos reproduce either acoustic or digital piano tones, with digital sound delivered through headphones or external audio equipment.
  - Yamaha Silent Series/MIDIPIanos reproduce digital piano and ensemble sound through headphones or external audio equipment.
  - Yamaha GranTouch, Disklavier GranTouch, and Clavinova pianos reproduce digital piano and ensemble tones through headphones or their internal amplified speaker system.
  - Reproduction of acoustic piano performance, including key and pedal movement, is possible only on Yamaha Disklavier pianos.
