We Want You Listening for a Lifetime

Yamaha and the Electronic Industries Association's Consumer Electronics Group want you to get the most enjoyment out of your equipment by playing it at a safe level — a level that lets the sound come through loud and clear without annoying blaring or distortion — and, most importantly, without damaging your sensitive hearing.

Since hearing damage from loud sounds is often undetectable until it is too late, Yamaha and the Electronic Industries Association's Consumer Electronics Group recommend that you avoid prolonged exposure to excessive volume levels.

Precautions: Read this before operating this unit

- To assure the finest performance, please read this manual carefully. Keep it in a safe place for future reference.
 - Install this unit in a cool, dry, clean place - away from windows, heat sources, sources of excessive vibration, dust, moisture and cold. Avoid sources of humming (transformers, motors). To prevent fire or electrical shock, do not expose this unit to rain or water.
 - Never open the cabinet. If any foreign objects drop into the set, contact your dealer.
 - The voltage to be used must be the same as that specified on the rear panel. Using this unit with a higher voltage than specified is dangerous and may cause a fire and/or electric shock.
 - To reduce the risk of fire or electric shock, do not expose this unit to rain or moisture.
 - Do not use force on switches, controls, or connection wires. When moving the unit, first disconnect the power plug and the wires connected to other equipments. Never pull the wires themselves.
 - When not planning to use this unit for a long period (ie., vacation, etc.), disconnect the AC power plug from the wall outlet.
 - To prevent lightning damage, disconnect the AC power plug when there is an electric storm.
 - Since this unit has a built-in power amplifier, heat will radiate from the rear panel. Place the unit apart from the walls, allowing at least 20 cm of space above, behind and on both sides of the unit to prevent fire or damage. Furthermore, do not position with the rear panel facing down on the floor or other surfaces.
 - Do not cover the rear panel of this unit with a newspaper, a tablecloth, a curtain, etc. in order not to obstruct heat radiation. If the temperature inside the unit rises, it may cause fire, damage to the unit and/or personal injury.
 - Do not place the following objects on this unit:
 - Glass, china, small metallic etc.
 - If glass etc. falls by vibrations and breaks, it may cause bodily injury.
 - A burning candle etc.
 - If the candle falls by vibrations, it may cause fire and bodily injury.
 - A vessel with water in it
 - If the vessel falls by vibrations and water spills, it may cause damage to the speaker, and/or you may get an electric shock.
 - Do not place this unit where foreign objects such as water drips might fall. It might cause a fire, damage to this unit, and/or personal injury.
 - Never put a hand or a foreign object into the YST port located on the right side of this unit. When moving this unit, do not hold the port as it might cause personal injury and/or damage to this unit.
 - Never place a fragile object near the YST port of this unit. If the object falls or drops by the air pressure, it may cause damage to the unit and/or personal injury.
 - Never open the cabinet. It might cause an electric shock since this unit uses a high voltage. It might also cause personal injury and/or damage to this unit.
 - When using a humidifier, be sure to avoid condensation inside this unit by allowing enough spaces around this unit or avoiding excess humidification. Condensation might cause a fire, damage to this unit, and/or electric shock.
 - Super-bass frequencies reproduced by this unit may cause a turntable to generate a howling sound. In such a case, move this unit away from the turntable.
 - This unit may be damaged if certain sounds are continuously outputted at high volume level. For example, if 20 Hz-50 Hz sine waves from a test disc, bass sounds from electronic instruments, etc. are continuously outputted, or when the stylus of a turntable touches the surface of a disc, reduce the volume level to prevent this unit from being damaged.
 - If you hear distorted noise (i.e., unnatural, intermittent “rapping” or “hammering” sounds) coming from this unit, reduce the volume level. Extremely loud playing of a movie soundtrack’s low frequency, bass-heavy sounds or similarly loud popular music passages can damage this subwoofer system.
 - Vibration generated by super-bass frequencies may distort images on a TV. In such a case, move this unit away from the TV set.
 - Do not attempt to clean this unit with chemical solvents as this might damage the finish. Use a clean, dry cloth.
 - Be sure to read the “TROUBLESHOOTING” section regarding common operating errors before concluding that the unit is faulty.
 - **Secure placement or installation is the owner’s responsibility. YAMAHA shall not be liable for any accident caused by improper placement or installation of the subwoofer.**
- VOLTAGE SELECTOR**
(For China, Korea and General models)
The voltage selector switch on the rear panel of this unit must be set for your local main voltage BEFORE plugging this unit into the AC main supply. Voltages are 110–120/220–240 V AC, 50/60 Hz.

WARNING

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE.

Introduction

Features

Advanced YST

Advanced Yamaha Active Servo Technology is a unique system to let the speaker unit have a perfectly linear motion by the speaker and amplifier combination.

QD-Bass Technology

QD-Bass (Quatre Dispersion Bass) technology is a Yamaha unique technology to radiate the sound efficiently in four horizontal direction.

Supplied accessories

Please confirm that the following item is included in the package.

Non-skid pads

Subwoofer cable (5 m)

Positioning the subwoofer

Although the placement of the subwoofer is not as critical as that of the other speakers, it is best to place the subwoofer outside either the right or left front speaker as shown in figure A.

A (Recommended)

- : Subwoofer
- : Front speaker

The placement shown in Figure **B** is also acceptable. However, in some cases, if you listen from the center of the room, the super-bass range from the subwoofer may sound weak. This is due to “standing waves” that can develop between parallel walls that effectively diminish or cancel the bass sound. In this event, face the subwoofer obliquely to the wall. It also may help to break up the parallel surface by placing bookshelves or other large objects along the wall.

B (Acceptable)

- : Subwoofer
- : Front speaker

Non-skid pads: Place the included non-skid pads at the four corners of the bottom of the subwoofer to prevent the subwoofer from sliding due to vibration or minor impact.

Connections

Caution: Plug the power cables for the subwoofer and other audio/video components into an AC outlet only after you complete all other connections.

Basic connection example

Connect a subwoofer cable to the output jack of your AV amplifier and to the INPUT jack of the subwoofer.

Amplifier (The rear panel of various amplifiers may differ in appearance.)

Connecting components and the subwoofer to AC power

After you complete a subwoofer connection, plug the amplifier, other audio/video component, and the subwoofer into an AC outlet of appropriate voltage. Make sure the subwoofer's VOLUME control is set to 0 before proceeding to adjust the speaker balance as described on page 4.

Using the subwoofer

Pre-adjusting the subwoofer volume

Before you use the subwoofer, first adjust the volume balance between the subwoofer and the front speakers by following the procedure below.

1. Set the **VOLUME** control to minimum (0).
2. Turn on the power to all other components.
3. Press the **POWER** switch to the ON position.
The power indicator on the rear panel lights up green.
4. Play a source that contains low-frequency sounds. Adjust the amplifier's volume control to the desired listening level.
5. Increase the volume gradually to adjust the volume balance between the subwoofer and the front speakers. To enjoy natural bass sound, keep the subwoofer volume at a level where it is barely distinguishable from other speakers.
6. Adjust the volume of the entire sound system using the amplifier's volume control.

① Power indicator

Lights up GREEN when the **POWER** switch (②) is turned ON; turns off when the **POWER** switch is turned OFF.

② POWER switch

Press this switch to the ON position to turn on the power to the subwoofer. When the power of the subwoofer is on, the power indicator (①) on the rear panel lights up green. Press this switch again to set it to the OFF position to turn off the power of the subwoofer.

③ VOLUME control

Adjusts the volume level. Turn the control clockwise to increase the volume, and counter-clockwise to decrease the volume.

④ INPUT terminal

Input terminal for line level signals from the amplifier.

Note: It is recommended to set the **VOLUME** control about in the middle position when using in a multi channel home theater system.

Advanced Yamaha Active Servo Technology

The theory behind Yamaha Active Servo Technology is based on two factors: the Helmholtz resonator and negative-impedance drive. Active Servo Processing speakers reproduce the bass frequencies through an “air woofer,” which is a port or opening in the speaker’s cabinet.

This opening is used instead of, and performs the functions of, a woofer in a conventionally designed speaker system.

Thus, signals of low amplitude within the cabinet can, according to Helmholtz resonance theory, be output from this opening as waves of great amplitude if the size of the opening and the volume of the cabinet are in proportion to satisfy a certain ratio. In order to accomplish this, moreover, the amplitudes within the cabinet must be both precise and of sufficient power because these amplitudes must overcome the “load” presented by the air in the cabinet.

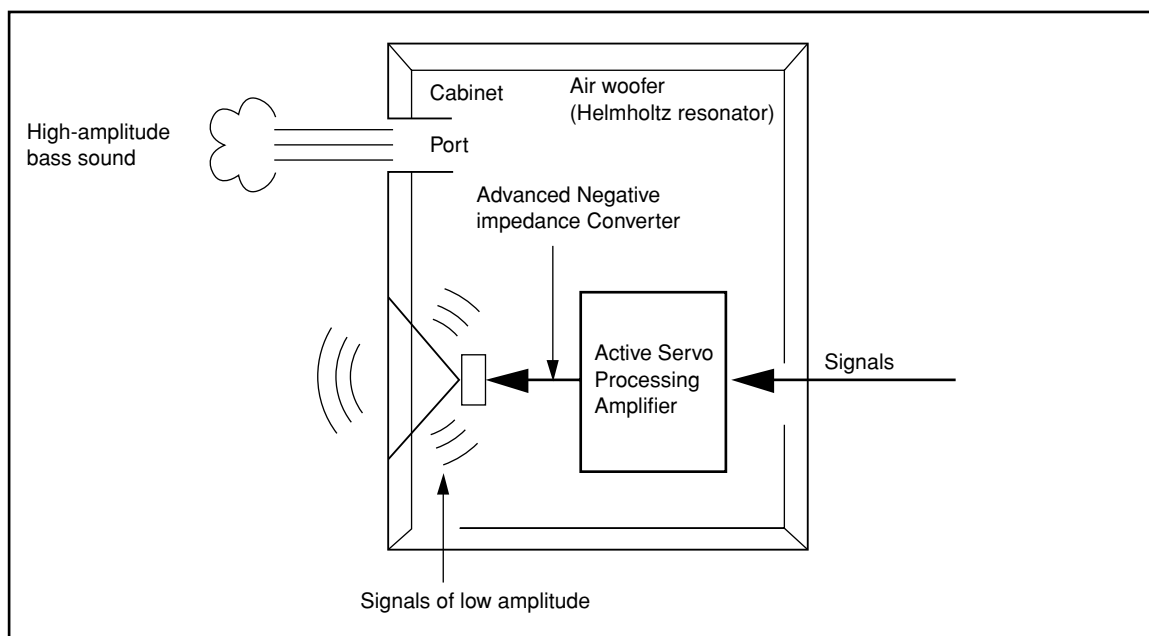

This problem is resolved by a design in which the amplifier supplies special signals. If the electrical resistance of the voice coil could be reduced to zero, the movement of the speaker unit would become linear with respect to signal voltage. To accomplish this, the system utilizes a special negative-impedance output-drive amplifier that subtracts the output impedance of the amplifier.

By employing negative-impedance drive circuits, the amplifier is able to generate precise, low-amplitude, low frequency waves with superior damping characteristics.

These waves are then radiated from the cabinet opening as high-amplitude signals. The system can, therefore, by employing the negative-impedance output drive amplifier and a speaker cabinet featuring a Helmholtz resonator, reproduce an extremely wide range of frequencies with outstanding sound quality and low distortion.

The features described above combine to create the fundamental structure of conventional Yamaha Active Servo Technology.

Our new Active Servo Technology — Advanced Yamaha Active Servo Technology — adopts Advanced Negative Impedance Converter (ANIC) circuits, which allow the conventional negative impedance converter to dynamically vary to select an optimum value for speaker impedance variation. With these new ANIC circuits, Advanced Yamaha Active Servo Technology provides a more stable performance and improved sound pressure compared to conventional Yamaha Active Servo Technology, resulting in more natural and dynamic bass reproduction.

Troubleshooting

Refer to the chart below if the unit does not function properly. If the problem you are experiencing is not listed, or if the instructions fail to help you resolve the problem, disconnect the power cord and contact your authorized Yamaha dealer or service center.

Problem	Cause	Remedy
Power is not supplied even though the POWER switch is set to the ON position.	The power plug is not securely connected.	Turn the power switch OFF, then connect the power plug securely.
No sound.	The VOLUME control is set to 0.	Turn the VOLUME control to the right (clockwise).
	A subwoofer cable is not connected securely.	Connect a subwoofer cable securely.
Sound level is too low.	You are playing a sound source that includes inadequate bass frequencies.	Play a sound source that includes more bass frequencies.
	The sound level has been diminished by standing waves.	Reposition the subwoofer, or break up the parallel wall surface by placing bookshelves or other large objects along the wall.
