How do I program TV remote control codes to the RX-V465/HTR-6240

1. Press \( \text{CODE SET} \) on the remote control using a pointed object such as the tip of a ballpoint pen.

   The \( \text{TRANSMIT} \) light on the remote control blinks twice.

2. Press the \( \text{[A]} \) input button one time.

3. Enter a remote control code using the Numeric Keys.

   Once the remote control code is registered, the \( \text{TRANSMIT} \) light on the remote control blinks twice. If it fails, the light blinks six times. Repeat from step 1.
