SAFETY INSTRUCTIONS

• Explanation of Graphical Symbols

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert you to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert you to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE.

- 1 Read Instructions All the safety and operating instructions should be read before the unit is operated.
- 2 Retain Instructions The safety and operating instructions should be retained for future reference.
- 3 Heed Warnings All warnings on the unit and in the operating instructions should be adhered to.
- 4 Follow Instructions All operating and other instructions should be followed.
- 5 Water and Moisture The unit should not be used near water – for example, near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement, or near a swimming pool, etc.
- 6 Carts and Stands The unit should be used only with a cart or stand that is recommended by the manufacturer.
- **6A** A unit and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the unit and cart combination to overturn.

7 Wall or Ceiling Mounting – The unit should be mounted to a wall or ceiling only as recommended by the manufacturer.

- 8 Ventilation The unit should be situated so that its location or position does not interfere with its proper ventilation. For example, the unit should not be situated on a bed, sofa, rug, or similar surface, that may block the ventilation openings; or placed in a built-in installation, such as a bookcase or cabinet that may impede the flow of air through the ventilation openings.
- **9** Heat The unit should be situated away from heat sources such as radiators, stoves, or other appliances that produce heat.
- **10** Power Sources The unit should be connected to a power supply only of the type described in the operating instructions or as marked on the unit.
- 11 Power-Cord Protection Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the unit.
- **12** Cleaning The unit should be cleaned only as recommended by the manufacturer.
- **13** Nonuse Periods The power cord of the unit should be unplugged from the outlet when left unused for a long period of time.
- 14 Object and Liquid Entry Care should be taken so that objects do not fall into and liquids are not spilled into the inside of the unit.
- **15** Damage Requiring Service The unit should be serviced by qualified service personnel when:
- A. The power-supply cord or the plug has been damaged; or
- **B.** Objects have fallen, or liquid has been spilled into the unit; or
- C. The unit has been exposed to rain; or
- **D.** The unit does not appear to operate normally or exhibits a marked change in performance; or
- E. The unit has been dropped, or the cabinet damaged.
- 16 Servicing The user should not attempt to service the unit beyond those means described in the operating instructions. All other servicing should be referred to qualified service personnel.
- 17 Power Lines An outdoor antenna should be located away from power lines.
- **18** Grounding or Polarization Precautions should be taken so that the grounding or polarization is not defeated.

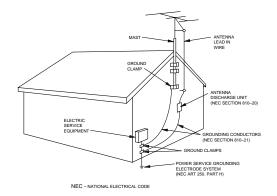

INTRODUCTION

19 For US customers only:

Outdoor Antenna Grounding – If an outside antenna is connected to this unit, be sure the antenna system is grounded so as to provide some protection against voltage surges and built-up static charges. Article 810 of the National Electrical Code, ANSI/NFPA 70, provides information with regard to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna discharge unit, size of grounding conductors, location of antenna discharge unit, connection to grounding electrodes, and requirements for the arounding electrode.

Note to CATV system installer:

This reminder is provided to call the CATV system installer's attention to Article 820-40 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical. EXAMPLE OF ANTENNA GROUNDING

FCC INFORMATION (for US customers only)

1. IMPORTANT NOTICE : DO NOT MODIFY THIS UNIT!

- This product, when installed as indicated in the instructions contained in this manual, meets FCC requirements. Modifications not expressly approved by Yamaha may void your authority, granted by the FCC, to use the product.
- IMPORTANT : When connecting this product to accessories and/or another product use only high quality shielded cables. Cable/s supplied with this product MUST be used. Follow all installation instructions. Failure to follow instructions could void your FCC authorization to use this product in the USA.
- 3. NOTE : This product has been tested and found to comply with the requirements listed in FCC Regulations, Part 15 for Class "B" digital devices. Compliance with these requirements provides a reasonable level of assurance that your use of this product in a residential environment will not result in harmful interference with other electronic devices.

This equipment generates/uses radio frequencies and, if not installed and used according to the instructions found in the users manual, may cause interference harmful to the operation of other electronic devices. Compliance with FCC regulations does not guarantee that interference will not occur in all installations. If this product is found to be the source of interference, which can be determined by turning the unit "OFF" and "ON", please try to eliminate the problem by using one of the following measures:

Relocate either this product or the device that is being affected by the interference.

Utilize power outlets that are on different branch (circuit breaker or fuse) circuits or install AC line filter/ s.

In the case of radio or TV interference, relocate/ reorient the antenna. If the antenna lead-in is 300 ohm ribbon lead, change the lead-in to coaxial type cable.

If these corrective measures do not produce satisfactory results, please contact the local retailer authorized to distribute this type of product. If you can not locate the appropriate retailer, please contact Yamaha Electronics Corp., U.S.A. 6660 Orangethorpe Ave, Buena Park, CA 90620.

The above statements apply ONLY to those products distributed by Yamaha Corporation of America or its subsidiaries.

We Want You Listening For A Lifetime

YAMAHA and the Electronic Industries Association's Consumer Electronics Group want you to get the most out of your equipment by playing it at a safe level. One that lets the sound come through loud and clear without annoying blaring or distortion – and, most importantly, without affecting your sensitive hearing. Since hearing damage from loud sounds is often undetectable until it is too late, YAMAHA and the Electronic Industries Association's Consumer Electronics Group recommend you to avoid prolonged exposure from excessive volume levels.

CAUTION: READ THIS BEFORE OPERATING YOUR UNIT.

- 1. To assure the finest performance, please read this manual carefully. Keep it in a safe place for future reference.
- Install this unit in a cool, dry, clean place away from windows, heat sources, sources of excessive vibration, dust, moisture and cold. Avoid sources of humming (transformers, motors). To prevent fire or electrical shock, do not expose the unit to rain or water.
- 3. Never open the cabinet. If something drops into the unit, contact your dealer.
- 4. Do not use force on switches, controls or connection wires. When moving the unit, first disconnect the power cord and then the wires connected to other component. Never pull the wires themselves.
- 5. The openings on the cover assure proper ventilation of the unit. If these openings are obstructed, the temperature inside the unit will rise rapidly. Therefore, avoid placing objects against these openings, and install the unit in a well-ventilated area to prevent fire and damage.
- 6. The voltage used must be the same as that specified on this unit. Using this unit with a higher voltage than specified is dangerous and may result in fire or other accidents. YAMAHA will not be held responsible for any damage resulting from the use of this unit with a voltage other than that specified.
- Digital signals generated by this unit may interfere with other component such as tuners, receivers and TVs. Move this unit farther away from such component if interference is observed.
- Always set VOLUME to the "∞" position before starting the audio source play. Increase the volume gradually to an appropriate level after playback has been started.
- 9. Do not attempt to clean the unit with chemical solvents; this might damage the finish. Use a clean, dry cloth.
- 10. Be sure to read the "TROUBLESHOOTING" section regarding common operating errors before concluding that the unit is faulty.
- 11. When not planning to use this unit for a long period of time (e.g., a vacation), disconnect the AC power cord from the wall outlet.

- 12. To prevent lightning damage, disconnect the AC power cord and disconnect the antenna cable when there is an electrical storm.
- Grounding or polarization Precautions should be taken so that the grounding or polarization of the unit is not defeated.
- AC outlet Do not connect audio component to the AC outlet on the rear panel if that component requires more power than the outlet is rated to provide.

This unit is not disconnected from the AC power source as long as it is connected to the wall outlet, even if this unit itself is turned off. This state is called the standby mode. In this state, this unit is designed to consume a very small quantity of power.

IMPORTANT

Please record the serial number of this unit in the space below.

MODEL:

Serial No.:

The serial number is located on the rear of the unit. Retain this Owner's Manual in a safe place for future reference.

WARNING

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE.

FOR CANADIAN CUSTOMERS

To prevent electric shock, match wide blade of plug to wide slot and fully insert.

This Class B digital apparatus complies with Canadian ICES-003.

FEATURES

5-Channel Power Amplification

 Minimum RMS Output (0.06% THD, 20 Hz – 20 kHz) [U.S.A. and Canada models] Main: $70 \text{ W} + 70 \text{ W} (8 \Omega)$ Center: 70 W (8 Ω) Rear: $70 \text{ W} + 70 \text{ W} (8 \Omega)$ [Australia model] $65 \text{ W} + 65 \text{ W} (8 \Omega)$ Main: Center: 65 W (8 Ω) Rear: $65 \text{ W} + 65 \text{ W} (8 \Omega)$

Multi-mode Digital Sound Field Processing

- Digital Sound Field Processor (DSP)
- Dolby Digital Decoder
- ◆ Dolby Pro Logic Decoder
- ♦ DTS Decoder
- ◆ CINEMA DSP: Theater-like Sound Experience by the Combination of YAMAHA DSP Technology and Dolby Digital, Dolby Pro Logic or DTS
- ◆ Automatic Input Balance Control for Dolby Pro Logic decoding

Sophisticated FM/AM Tuner

- ♦ 40-Station Random Access Preset Tuning
- ◆ Automatic Preset Tuning
- Preset Station Shifting Capability (Preset Editing)

Other Features

- ◆ "SET MENU" which Provides You with 11 Items for Optimizing This Unit for Your Audio/Video System
- ◆ Test Tone Generator for Easier Speaker Balance Adjustment
- ◆ 6-Channel External Decoder Input for Other Future Formats
- ◆ Video Signal Input/Output Capability (Including S Video Connections)
- ◆ 2 Optical/1 Coaxial Digital Signal Input Terminals
- ♦ SLEEP Timer
- Remote Control with Preset Manufacturer Codes

GETTING STARTED

Checking the Package Contents

Check that the following items are included in your package.

Remote control

Batteries (AAA, R03, UM-4 type)

Indoor FM antenna

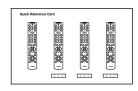

AM loop antenna

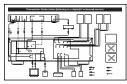

Antenna adapter (U.S.A. and Canada models only)

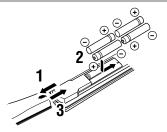

Quick reference card

Connection guide

Battery Installation in the Remote Control

- **1** Turn the remote control over and slide the battery compartment cover in the direction of the arrow.
- **2** Insert the batteries (AAA, R03 or UM-4 type) according the polarity markings on the inside of the battery compartment.
- **S** Close the battery compartment cover.

Battery Replacement

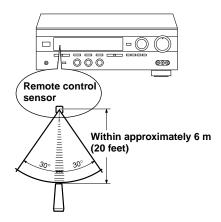

If the remote control operates only when it is close to the unit, the batteries are weak. Replace all the batteries with new ones.

Be sure to replace the batteries within about two minutes. If it takes longer than two minutes, the codes preset for the remote control will return to the factory settings. (Refer to pages 40 to 46 about the remote control.)

Notes

- Use only AAA, R03 or UM-4 batteries for replacement.
- Be sure the battery polarity is correct. (See the illustration inside the battery compartment.)
- Remove the batteries if the remote control will not be used for an extended period of time.
- If the batteries have leaked, dispose of them immediately. Avoid touching the leaked material or letting it come into contact with clothing, etc. Clean the battery compartment thoroughly before installing new batteries.

Using the Remote Control

The remote control transmits a directional infrared beam. Be sure to aim the remote control directly at the infrared sensor during operation. When the sensor is covered or there is a large object between the remote control and the sensor, the sensor cannot receive signals. The sensor may not be able to receive signals properly when it is exposed to direct sunlight or a strong artificial light (such as a fluorescent or strobe light). In this case, change the direction of the light or reposition the unit to avoid direct lighting.

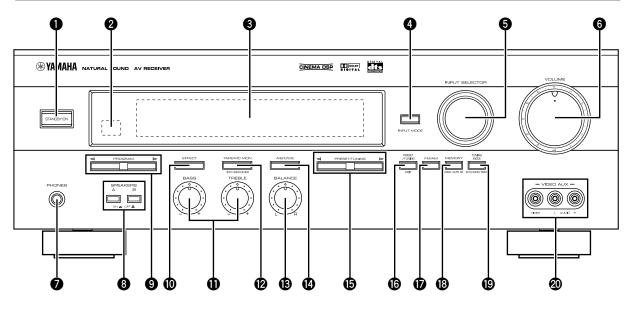

Notes

- Handle the remote control with care.
- Do not spill water, tea or other liquids on the remote control.
- Do not drop the remote control.
- Do not leave or store the remote control in the following conditions:
 - high humidity or temperature such as near a heater, stove or bath;
 - dusty places; or
 - extremely low temperature.

CONTROLS AND FUNCTIONS

Front Panel

STANDBY/ON

Press this switch to turn on the power of this unit or to set this unit in the standby mode. Before turning the power on, set VOLUME to the " ∞ " position.

Standby mode

In this mode, this unit consumes a very small quantity of power to receive infrared-signals from the remote control.

2 Remote control sensor

This receives signals from the remote control.

3 Display

This shows various information. (Refer to page 6 for details.)

4 INPUT MODE

Press this button to select the input mode among AUTO, DTS and ANALOG for the DVD/LD, TV/digital TV and satellite tuner sources.

5 INPUT SELECTOR

Turn this selector to select the input source (TUNER, CD, PHONO, V-AUX, VCR, SAT/D-TV, DVD/LD) that you want to listen to or watch. The arrow for the selected input source indicator lights up on the display.

6 VOLUME

Turn this control to turn up or down the volume.

PHONES jack

Connect the headphones to the PHONES jack. You can listen to the sound to be output from the main speakers through the headphones.

When using headphones only, set both SPEAKERS A and B to the OFF position and press EFFECT to turn off the effect speakers (center and rear) (so that no DSP program name appear on the display).

8 SPEAKERS

Set A or B (or both A and B) to the ON position for the main speaker system (connected to this unit) that you want to use. Set the button(s) to the OFF position for the main speaker system that you don't want to use.

PROGRAM selector

Press \blacktriangleleft or \blacktriangleright to select a DSP program when the effect speakers (center and rear) are turned on. The name of the selected program appears on the display.

EFFECT

Press this button to turn on or off the effect speakers (center and rear). If you turn them off, all Dolby Digital and DTS audio signals are directed to the right and left main speakers. In that case, the output levels of the right and left speakers may not match.

Tone controls

These controls are only effective for the sound from the main speakers.

a) BASS

Turn this control clockwise to increase or counterclockwise to decrease the low-frequency response. The "0" position produces a flat response.

b) TREBLE

Turn this control clockwise to increase or counterclockwise to decrease the high-frequency response. The "0" position produces a flat response.

TAPE/MD MON / EXT. DECODER

Press this button to select a tape or an MD source. The "TAPE/MD MONITOR" indicator lights up on the display. When you press the button next, the "TAPE/MD MONITOR" indicator goes off, "EXT. DECODER" appears on the display and you can listen to a source connected to the EXTERNAL DECODER INPUT terminals.

BALANCE

This control is only effective for the sound from the main speakers.

Turn the control to adjust the balance of the output volume from the right and left main speakers to compensate for sound imbalance caused by the speaker location or listening room conditions.

A/B/C/D/E

Press this button to select one of a group (A to E) of preset stations.

PRESET/TUNING

When "?" appears

This button is used to select a preset station number (1 to 8). Press \blacktriangleright to select a higher and \blacktriangleleft to select a lower preset station number.

When ">" goes off

This button is used for tuning. Press \blacktriangleright to tune in to higher frequencies, and \blacktriangleleft to tune in to lower frequencies.

PRESET/TUNING, EDIT

Press this button to turn on or off ">" on the display and switch the function between for storing a broadcasting station (preset tuning) and for tuning. This button is also used to exchange the assignment of two preset stations with each other.

🕑 FM/AM

Press this button to switch the reception band between FM and AM.

MEMORY (MAN'L/AUTO FM)

Press this button to store the broadcasting stations. Hold down this button for more than three seconds to begin automatic preset tuning.

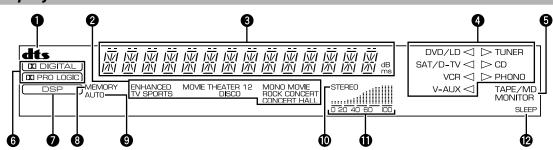

TUNING MODE (AUTO/MAN'L MONO)

Press this button to switch the tuning mode between automatic and manual. To use the automatic tuning method, press this button so that the "AUTO" indicator lights up on the display. To use the manual tuning method, press this button so that the "AUTO" indicator goes off.

VIDEO AUX terminals

Connect an auxiliary audio or video input source such as a camcorder to these terminals. Use INPUT SELECTOR to select the source connected to these terminals.

Display

0 dts indicator

The "**dts**" indicator lights up when the built-in DTS decoder is turned on.

② DSP program indicators

The name of the selected DSP program lights up in the following cases:

- When the tuner is selected as the input source.
- When DSP program No. 2, 3 or the subprogram "ENHANCED" of No.1 is selected.

Multi-information display

This display shows various information: for example the name of the selected DSP program and the various settings during adjustment with the SET MENU. The current station frequency and band (FM or AM) also appear when the tuner is selected as the input source.

Input source indicators

One of the arrows for these indicators lights up depending on which source is selected.

G TAPE/MD MONITOR indicator

This lights up when the tape deck or MD recorder, etc. is selected as the input source by pressing TAPE/MD MON / EXT. DECODER (or TAPE/MD).

6 DIGITAL and DIGIC indicators

"DIGITAL" lights up when the built-in Dolby Digital decoder is on and the signals of the selected source are encoded with Dolby Digital. "DIPRO LOGIC" lights up when the built-in Dolby Pro Logic decoder is on.

DSP indicator

" "DSP" " lights up when the built-in digital sound field processor is on.

8 MEMORY indicator

This flashes for about five seconds after pressing MEMORY. During this period, the displayed station can be stored in the memory.

AUTO indicator

This lights up when the unit is in the automatic tuning mode.

STEREO indicator

This lights up when an FM stereo broadcast with sufficient signal strength is being received.

Signal-level indicator

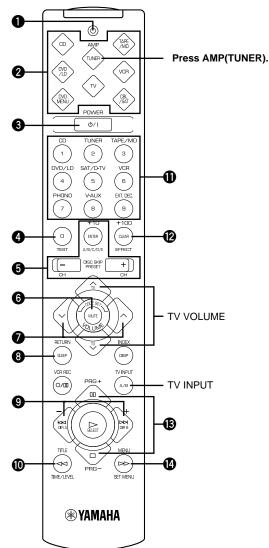

This indicates the signal level of the station being received. If multipath interference is detected, the indication decreases.

SLEEP indicator

This lights up while the built-in SLEEP timer is on.

Remote Control

This section describes basic operation of this unit with the remote control. First, press AMP(TUNER) on the component selector. Refer to "PRESET REMOTE CONTROL" on page 40 for full details.

Indicator

This flashes in red when pressing a button on the remote control. If it flashes rapidly several times, press the selected button again.

2 Component selector buttons

Press one of these buttons which corresponds to the component you want to control with the remote control. (The proper code must be set for your component. Refer to "Setup codes" on page 45.) When the component selector button has been pressed, the remote control is set to that component operation mode.

3 POWER

Each time you press this button, the unit switches between the power on and standby mode.

4 TEST

Press this button to output the test tone for each speaker.

A/B/C/D/E, PRESET +/-

These buttons are used to select a preset station. A/B/C/D/E: To select one of a group (A to E) of preset stations

PRESET +/-: To select a preset station number (1 to 8)

6 MUTE

Press this button to mute the sound. To cancel mute, press this button again.

VOLUME

These buttons are used to adjust the volume level.

- \wedge : To turn up the volume
- \checkmark : To turn down the volume

8 SLEEP

Press this button to set the SLEEP timer.

9 +/-

These buttons adjust the settings of the SET MENU and TIME/LEVEL mode.

TIME/LEVEL

Press this button to select the items in the TIME/LEVEL mode.

Input selector buttons

These buttons select the input source.

CD:	To play a CD
TUNER:	To listen to an FM or AM broadcast
TAPE/MD:	To play a tape or MD
DVD/LD:	To play a DVD or LD
SAT/D-TV:	To watch a TV or satellite broadcast
VCR:	To play a video cassette
PHONO:	To play an analog record
V-AUX:	To use a camcorder
EXT. DEC.:	To play other multi-channel source

B EFFECT

Press this button to turn on or off the effect speakers (center and rear).

PRG+, PRG-

Press these buttons to select a DSP program.

SET MENU

Press this button to select the items in the SET MENU.

SPEAKER SETUP

Speakers to Be Used

This unit is designed to provide the best sound-field quality with a 5-speaker system, using main speakers, rear speakers and a center speaker. If you use different brands of speakers (with different tonal qualities) in your system, the tone of a moving human voice and other types of sound may not shift smoothly. We recommend that you use speakers from the same manufacture or speakers with the same tonal quality.

The main speakers are used for the main source sound plus the effect sounds. They will probably be the speakers from your present stereo system. The rear speakers are used for the effect and surround sounds, and the center speaker is for the center sounds (dialog, vocals, etc.). If for some reason it is not practical to use a center speaker, you can do without it. Best results, however, are obtained with the full system.

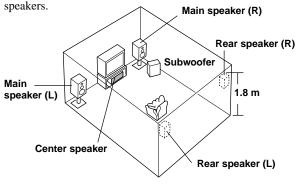

The main speakers should be high-performance models and have enough power-handling capacity to accept the maximum output of your audio system. The other speakers do not have to be equal to the main speakers. For precise sound localization, however, it is ideal to use highperformance models that can reproduce sounds over the full range for the center speaker and the rear speakers.

Use of a subwoofer expands your sound field

It is also possible to further expand your system with the addition of a subwoofer. The use of a subwoofer is effective not only for reinforcing bass frequencies from any or all channels, but also for reproducing the LFE (low frequency effect) channel with high fidelity when playing back a source encoded with Dolby Digital or DTS. The YAMAHA Active Servo Processing Subwoofer System is ideal for natural and lively bass reproduction.

Speaker Placement

Refer to the following diagram when you place the

Main speakers

Place the right and left main speakers an equal distance from the ideal listening position. The distance of each speaker from each side of the TV monitor should be the same.

Rear speakers

Place these speakers behind your listening position, facing slightly inwards, nearly 1.8 m (approx. 6 feet) above the floor.

Center speaker

Align the front face of the center speaker with the front face of your TV monitor. Place the speaker as close to the monitor as possible, such as directly over or under the monitor and centrally between the main speakers.

Note

• If the center speaker is not used, the sound will be heard from the right and left main speakers. In that case, "CENTER SP" in the SET MENU is set to the NONE position. (Refer to page 34 for details.)

Subwoofer

The position of the subwoofer is not so critical, because low bass sounds are not highly directional. But it is better to place the subwoofer near the main speakers. Turn it slightly toward the center of the room to reduce the wall reflections.

CAUTION

Some types of speakers interfere with a TV monitor. If this problem occurs, move the speakers away from the monitor. If you cannot avoid installing the center speaker or subwoofer near the TV monitor, use magnetically shielded speakers.

) ____

Before Connecting Components

CAUTION

Never connect this unit and other components to mains power until all connections between components have been completed.

Be sure all connections are made correctly, that is to say L (left) to L, R (right) to R, "+" to "+" and "-" to "-". Some components require different connection methods and have different terminal names. Refer to the instructions for each component to be connected to this unit.

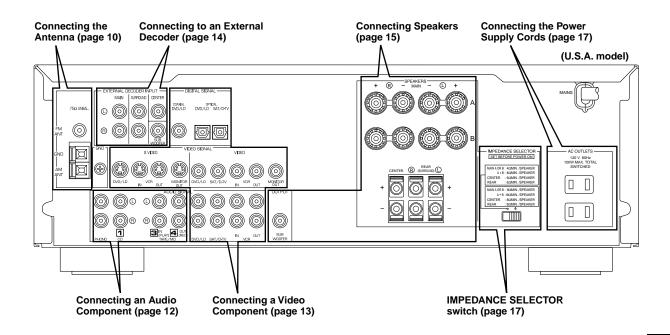

When you connect other YAMAHA audio components (such as a tape deck, MD recorder and CD player or changer), connect it to the terminals with the same number labels as 1, 3, 4 etc. YAMAHA applies this labeling system to all its products.

Use RCA-type pin plug cables for connecting audio/video components with the exception described later.

The input and output terminals for pin plugs can be distinguished as follows:

Yellow	video signals (composite)		
White	analog audio signals for the left channel	-= -	d'E
Red	analog audio signals for the right channel		
	coaxial digital signals		

After completing all connections, check them again to make sure they are correct.

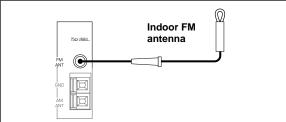

Connecting the Antennas

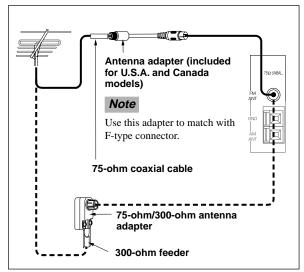

Both AM and FM indoor antennas are included with this unit. In general, these antennas should provide sufficient signal strength. However, a properly installed outdoor antenna provides clearer reception than an indoor one. If you experience poor reception quality, an outdoor antenna may improve the quality.

Connect each antenna correctly to the designated terminals.

Indoor FM antenna (included)

Outdoor FM antenna

Firmly insert the connector into the FM ANT terminal. The indoor FM antenna is only a simple antenna. For reception with better sound quality, installing the outdoor FM antenna (commercially available) is recommended.

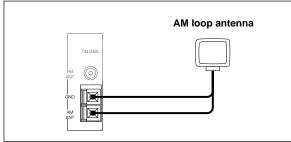

Note

• Do not connect an outdoor FM antenna and the indoor FM antenna at the same time.

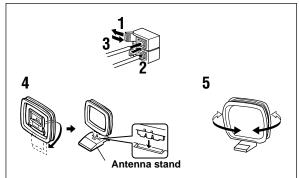

You may be unable to obtain good FM radio reception depending on your local conditions (distance from the broadcasting station, interposing buildings and mountains, etc.). Consult your dealer or authorized service center and be sure to install an antenna that suits your local conditions.

Install the outdoor FM antenna (commercially available) in a high place as far away from any roads as possible to avoid being affected by automobile ignition noise.

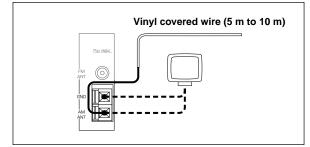

AM loop antenna (included)

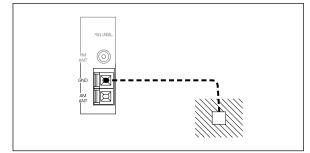

Connecting the AM loop antenna

Outdoor AM antenna

Ground (GND terminal)

The AM loop antenna can be removed from the stand and attached to a wall, etc. However, note that the reception sensitivity may deteriorate if the antenna is attached to a metal or steel reinforced wall.

Notes

- The AM loop antenna should be placed away from this unit.
- The AM loop antenna should always be connected, even if an outdoor AM antenna is connected to this unit.

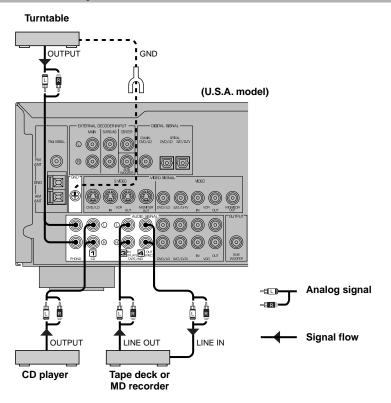

- **2** Insert the AM loop antenna lead wires into the AM ANT and GND terminals.
- Return the tab to its original position to lock the lead wires. Lightly pull the lead wires to confirm a good connection.
- 4 Attach the loop antenna to the antenna stand.
- **5** Orient the AM loop antenna so that the best reception is obtained.

If you cannot obtain good reception with the AM loop antenna, connect 5 m to 10 m of vinyl covered wire to the AM ANT terminal and extend it outdoors from a window.

For maximum safety and minimum interference, connect the antenna GND terminal to a good earth ground. A good earth ground is a metal stake driven into moist earth.

Connecting an Audio Component

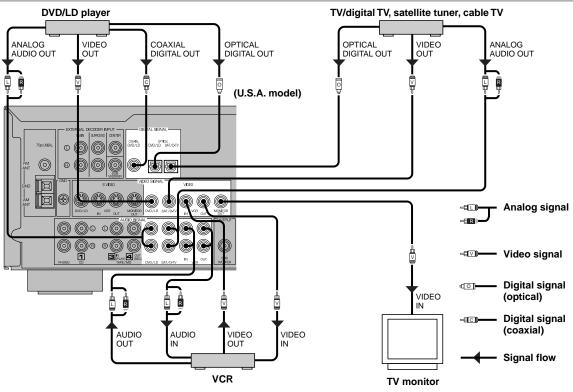

Be sure to connect the right channel (R), left channel (L), input (IN) and output (OUT) properly.

PHONO terminals

These terminals are used to connect a turntable with an MM or high-output MC cartridge. If you have a turntable with a low-output MC cartridge, use an inline boosting transformer or MC head amplifier when connecting to these terminals.

Connecting the ground (earth) wire of the turntable to the GND terminal will normally minimize hum, but in some cases, better results may be obtained with the ground wire disconnected.

Connecting a Video Component

Audio signal terminals

Be sure to connect the right channel (R), left channel (L), input (IN) and output (OUT) properly.

Video signal terminals

Be sure to connect the input (IN) and output (OUT) properly.

Digital audio signal terminals

If your DVD/LD player, TV/digital TV or satellite tuner, etc. has coaxial or optical digital signal output terminals, they can be connected to this unit's COAXIAL and/or OPTICAL digital signal input terminals. To make a connection between the optical digital signal terminals, remove the cover from each terminal, and then connect them by using a commercially available optical fiber cable that conforms to EIA standards. Other cables might not function correctly.

When making connections between the digital signal terminals, you should connect the components to the samenamed analog audio signal terminals of this unit, because a digital signal cannot be recorded by a tape deck, MD recorder or VCR connected to this unit.

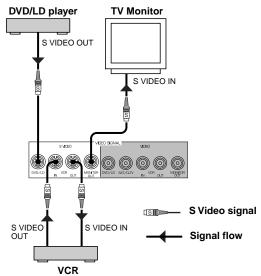

Notes

- Be sure to attach the covers when the OPTICAL terminals are not being used in order to protect them from dust.
- If your LD player has a Dolby Digital RF signal output terminal, be sure to use the RF demodulator (separately purchased).
- No sound will be heard when connecting your LD player's Dolby Digital RF signal output terminal directly to this unit's COAXIAL DVD/LD digital signal input terminal.

<u>`</u>`

- The input signal from the DVD/LD input terminals is selected in the following order of priority with the input mode set to AUTO: COAXIAL terminal → OPTICAL terminal → Analog terminal. Refer to page 22 for details.
- All digital signal input terminals are applicable to sampling frequencies of 32 kHz, 44.1 kHz and 48 kHz.

SVIDEO terminals

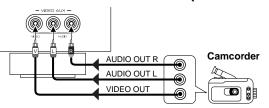

If your VCR, TV monitor or DVD/LD player has "S" (highresolution) video terminals, they can be connected to this unit's S VIDEO terminals. Connect the VCR's "S" video input and output terminals to this unit's S VIDEO VCR OUT and IN terminals, respectively. Connect the monitor's "S" video input terminal to this unit's S VIDEO MONITOR OUT terminal. Connect the DVD/LD player's "S" video output terminal to this unit's S VIDEO DVD/LD terminal. Otherwise, connect the composite video terminals of your VCR, TV monitor or DVD/LD player to this unit's composite video terminals.

Notes

- Use a special S VIDEO cable (commercially available) for the S VIDEO connection.
- If video signals are input from both the S VIDEO input and composite input terminals, the signals will be directed to their respective output terminals.

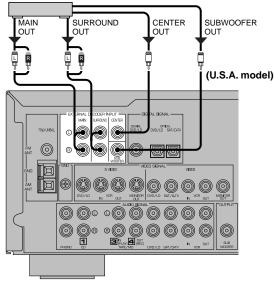

I VIDEO AUX terminals (on the front panel)

These terminals are used to connect any video input source such as a camcorder to this unit.

Connecting to an External Decoder

External decoder

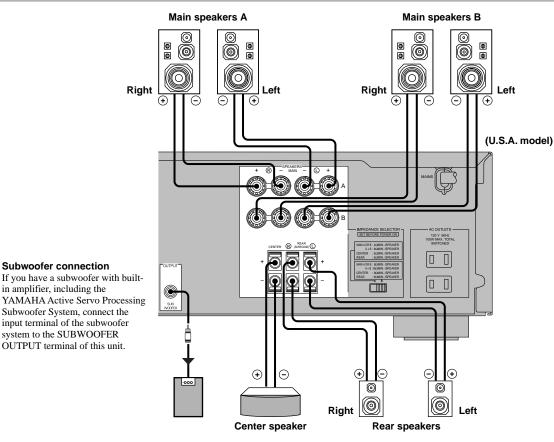

This unit has additional 6-channel audio signal input terminals for connecting an external decoder to this unit. Connect the 6-channel audio signal output terminals of the decoder to the EXTERNAL DECODER INPUT terminals of this unit.

Notes

- When a source connected to these terminals is selected, the digital sound field processor cannot be used.
- The settings of "CENTER SP", "REAR SP", "MAIN SP" and "BASS OUT" in the SET MENU have no effect on a source connected to these terminals. The setting of "MAIN LVL" is effective. (Refer to pages 34 and 35 for details.)

Connecting Speakers

Be sure to connect the right channel (R), left channel (L), "+" (red) and "-" (black) properly. If the connections are faulty, no sound will be heard from the speakers, and if the polarity of the speaker connections is incorrect, the sound will be unnatural and lack bass.

CAUTIONS

- Use speakers with the specified impedance shown on the rear panel of this unit.
- Do not let the bare speaker wires touch each other and do not let them touch any metal part of this unit. This could damage the unit and/or speakers.

Main speaker terminals

One or two speaker systems can be connected to these terminals. If you use only one speaker system, connect it to either of the SPEAKERS A or B terminals.

Rear speaker terminals

A rear speaker system can be connected to these terminals.

Center speaker terminal

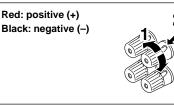

A center speaker can be connected to this terminal.

Speaker cables

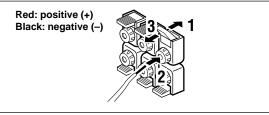

- **1** Remove approx. 10 mm (3/8") of insulation from each of the speaker cable.
- **2** Twist the exposed wires of the cable together to prevent short circuits.

Connecting to the MAIN SPEAKERS terminals

- 1 Unscrew the knob.
- **2** Insert one bare wire into the hole in the side of each terminal.
- **3** Tighten the knob to secure the wire.

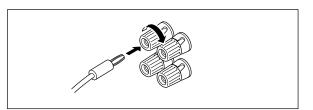

Connecting to the REAR and CENTER SPEAKERS terminals

1	Open	the	tab.
5	_		-

Insert one bare wire into the hole of each terminal.

<u>`</u>`

Banana plug connections are also possible. Simply insert the banana plug connector into the corresponding terminal.

IMPEDANCE SELECTOR Switch

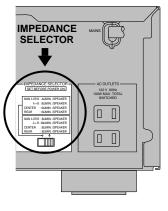

WARNING

Do not change the IMPEDANCE SELECTOR switch setting while the power to this unit is on, otherwise the unit may be damaged.

If this unit fails to turn on when STANDBY/ON is pressed, the IMPEDANCE SELECTOR switch may not be fully slide to either position. If so, slide the switch to either position fully when this unit is in the standby mode.

Select the right or left position according to the impedance of speakers in your system. Be sure to move this switch only when this unit is in the standby mode.

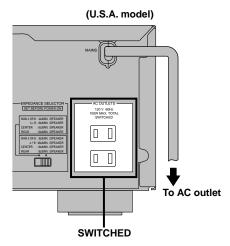

(U.S.A. model)

If you use	left position	right position
Center	The impedance must be 6Ω	The impedance must be 8 Ω
speaker	or higher.	or higher.
Rear	The impedance of each	The impedance of each
speakers	speaker must be 6 Ω or	speaker must be 8 Ω or
	higher.	higher.
Main	If you use one pair of main speakers, the impedance of each speaker must be 4 Ω or higher.	If you use one pair of main speakers, the impedance of each speaker must be 8Ω or higher.
speakers	If you use two pairs of main speakers, the impedance of each speaker must be 8 Ω or higher.	If you use two pairs of main speakers, the impedance of each speaker must be 16Ω or higher. [Canada model only] The impedance of each speaker must be 8Ω or higher.

Connecting the Power Supply Cords

AC OUTLETS (SWITCHED)

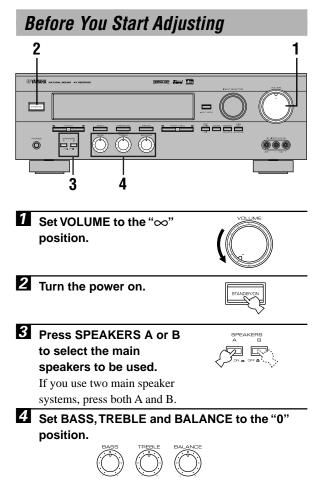

After completing all connections, connect the AC power cord to an AC power outlet. Disconnect the AC power cord if you will not use this unit for a long period of time.

U.S.A. and Canada models 2 OUTLETS
Australia model 1 OUTLET
Use these outlets to connect the power cords from your
components to this unit. The power to the AC OUTLET(S)
is controlled by this unit's STANDBY/ON (or POWER).
These outlets will supply power to any connected
component whenever this unit is turned on. The maximum
power (total power consumption of components) that can be
connected to the AC OUTLET(S) is 100 W.

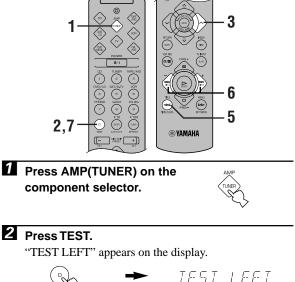

ADJUSTING THE SPEAKER BALANCE

This procedure lets you adjust the sound output level balance between the main, center and rear speakers by using the built-in test tone generator. When this adjustment is performed, the sound output level heard at the listening position will be the same from each speaker. This is important for the best performance of the digital sound field processor, the Dolby Pro Logic decoder, Dolby Digital decoder and DTS decoder.

Using the Test Tone

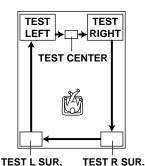

The adjustment of each speaker sound output level should be performed at your listening position with the remote control. After completing the adjustments, use VOLUME (//) at your listening position to check if the adjustments are satisfactory.

3 Turn up the volume.

You will hear a test tone (like pink noise) from each speaker for about two seconds in following order: left main speaker, center speaker, right main speaker, right rear speaker and left rear speaker. The display changes as shown below.

Notes

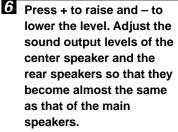

- If the test tone cannot be heard, turn down the volume, set the unit in the standby mode and check the speaker connections.
- If the test tone cannot be heard from the center speaker, check the setting of "CENTER SP" in the SET MENU.

4 Adjust BALANCE on the front panel so that the sound output level of the right main speaker and the left main speaker is the same.

TITLE

Press TIME/LEVEL repeatedly to select the speaker to be adjusted. "CENTER", "R SUR." or "L SUR." appears on the display.

While adjusting, the test tone is heard from the selected speaker.

Note

• You cannot adjust the delay time while the test tone is being heard even if "DELAY" appears on the display.

When the adjustment is complete, press TEST.

"TEST OFF" appears on the display and the test tone stops.

TEST DEE

Note

• If "CENTER SP" in the SET MENU is set to the NONE position, the sound output level of the center speaker cannot be adjusted in step 6. The center channel sound is automatically output from the right and left main speakers.

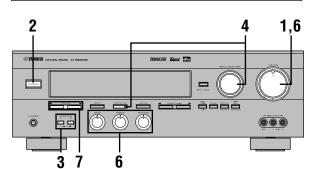

<u>`</u>`

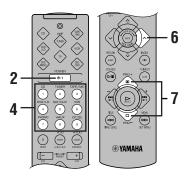

- Once you have completed the adjustments, you can only adjust the overall volume level of your audio system by using VOLUME (or VOLUME (
- If there is insufficient sound output from the center and rear speakers, you may decrease the main speaker output level by setting "MAIN LVL" in the SET MENU to "-10 dB". (Refer to page 35 for details.)

PLAYING A SOURCE

When using the remote control, press AMP(TUNER) on the component selector.

1 Set VOLUME to the " ∞ " position.

2 Turn the power on.

or

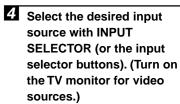

Remote control

SPEAKERS

Front panel

Press SPEAKERS A or B to select the main speakers to be used.

If you use two main speaker systems, press both A and B.

The name of the selected input source appears for a moment and the arrow for the selected input source indicator lights up on the display.

Remote control

Input source

a. To select a tape or an MD source Press TAPE/MD MON / EXT. DECODER (or TAPE/MD) so that the "TAPE/MD FI MONITOR" indicator lights up on the display.

b. To select a source connected to the EXTERNAL DECODER INPUT terminals Press TAPE/MD MON / EXT. DECODER repeatedly (or EXT. DEC.) until "EXT. DECODER" appears on the display.

Notes

- An audio source can not be played if the "TAPE/MD MONITOR" indicator lights up or if "EXT. DECODER" appears. Press TAPE/ MD MON / EXT. DECODER twice (or TAPE/MD once) to turn off the "TAPE/MD MONITOR" indicator. Press TAPE/MD MON / EXT. DECODER once (or EXT. DEC.) to turn off "EXT. DECODER".
- If you select and play a video source when the "TAPE/MD MONITOR" indicator lights up or "EXT. DECODER" appears, the play back result will be a video image from the video source and the sound from the audio source selected by using TAPE/MD MON / EXT. DECODER (or TAPE/MD or EXT. DEC.).

`**`**∳′-

For the DVD/LD, TV/digital TV and satellite tuner sources, the current input mode is also shown. Refer to page 22 for details about the input mode.

5 Play the source.

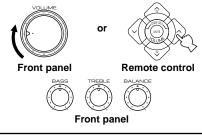

Refer to the instructions for the source component (and page 28 for details about tuning).

Note

 When controlling an audio/video component (tape deck, MD recorder, CD player, DVD/LD player, etc.) with the remote control, press one of the component selector buttons, (TAPE/MD, CD, DVD/LD, etc.), which corresponds to the component you want to control. Refer to "PRESET REMOTE CONTROL" on page 40.

6 Adjust the volume to the desired output level. If desired, adjust BASS, TREBLE, BALANCE, etc. These controls are only effective for the sound from the main speakers.

- BASS controls the low-frequency response.
- TREBLE controls the high-frequency response.
- BALANCE adjusts the balance of the output volume from the right and left main speakers.

Z Use the digital sound field processor. Refer to page 24.

Front panel

Remote control

To mute the sound

Press MUTE on the remote

control.

To cancel mute, press MUTE.

Note

• During muting, "MUTE ON" appears on the display.

When you have finished using this unit

Press STANDBY/ON (or POWER) to set this unit in the standby mode.

■ BGV (background video) function

The BGV function allows you to combine a video image from a video source with a sound from an audio source. (For example, you can listen to classical music while you are watching a video.) This function can only be controlled with the remote control.

Play a video source, and then select an audio source with the input selector buttons on the remote control. The BGV function does not work if you select the audio source with INPUT SELECTOR on the front panel.

PLAYING A SOURCE

Input Mode (for the DVD/LD and TV/ digital TV and satellite tuner sources)

This unit allows you to switch the input mode for sources that send both digital and analog signals to this unit. The AUTO, DTS and ANALOG input modes are provided.

When you turn on the power of this unit, the input mode for the DVD/LD source is always set to AUTO and for TV/ digital TV or satellite tuner source is set according to "SAT INPUT" in the SET MENU. (Refer to page 36 for details.)

AUTO

In this mode, the input signal is selected in the following order of priority:

- 1. Digital signal encoded with Dolby Digital or DTS
- 2. Normal digital signal (PCM)
- 3. Analog signal (ANALOG)

Note

• If digital signals are input from both the OPTICAL and COAXIAL terminals, the digital signal from the COAXIAL terminal is selected.

DTS

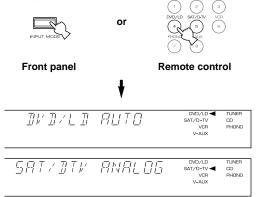

In this mode, only a digital signal encoded with DTS is selected, even if other signals are being input at the same time.

ANALOG

In this mode, only an analog signal is selected, even if a digital signal is being input at the same time. Select this mode when you want to use an analog signal instead of a digital signal.

Switching the input mode

Press INPUT MODE (or the input selector button that you have pressed to select the input source on the remote control) repeatedly until the desired input mode is shown on the display.

Notes

- Set the input mode to AUTO to play a DVD/LD source encoded with Dolby Digital.
- Set the input mode to ANALOG to play a normal 2-channel source with a Dolby Surround program.
- The sound output may be interrupted for some LD and DVD players in the following situation: The input mode is set to AUTO. A search is performed while playing the disc encoded with Dolby Digital or DTS, and then disc playing is restored. The sound output is interrupted for a moment because the digital signal was selected again.
- The input mode cannot be changed for the CD, TUNER, TAPE/ MD, VCR, PHONO and VIDEO AUX sources because only analog signals are used for these.
- The current input mode appears on the display when the DVD/ LD, TV/digital TV or satellite tuner source is selected or the input mode is changed.

Notes on playing a source encoded with DTS

- If "DATA ERROR" appears on the display while playing an LD source encoded with DTS, stop playback and turn the player off and then on again.
- If the digital output data of the player has been processed in any way, you may not be able to perform DTS decoding even if you make a digital connection between this unit and the player.
- If you play an LD source encoded with DTS and set the input mode to ANALOG, there will be the noise of an unprocessed DTS signal. When you want to play a DTS source, be sure to connect the source to the digital input terminal and set the input mode to AUTO or DTS.
- If you switch the input mode to ANALOG while playing a source encoded with a DTS signal, this unit reproduces no sound.
- If you play an LD source encoded with DTS and set the input mode to AUTO, there will be a short noise at first while the unit recognizes the DTS signal and turns on the DTS decoder. This is not a malfunction, and can be avoided by setting the input mode to DTS beforehand. In addition, if you continue to play an LD encoded with DTS with the input mode setting left to AUTO, this unit automatically switches to the "DTS-decoding" mode to prevent noise from being generated during subsequent operation. (The "dts" indicator lights up on the display.) No sound will be heard if a normal PCM LD is played in this mode. (The "dts" indicator will flash.) To play a normal disk, set the input mode to AUTO again.

■ Notes on playing an LD source

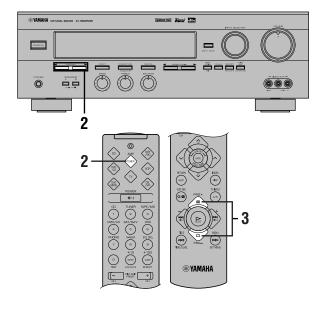

- Some audio/video component, such as LD player, output different audio signals through their analog and digital terminals. Change the input mode as necessary.
- If the input mode is set to AUTO for the LD source, this unit automatically determines which type of signal the LD source contains. If this unit detects a Dolby Digital or DTS signal, the decoder automatically switches to the appropriate setting and reproduces 5.1 channel sound.
- If the LD player is transmitting signals by a non-normal method, this unit cannot detect the Dolby Digital or DTS signal. In this case, the decoder automatically switches to PCM or analog.
- If the LD source does not contain a digital soundtrack, connect the LD player to the analog terminals and set the input mode to AUTO or ANALOG.
- While you are operating the LD player, if you switch from the pause or chapter forwarding function to normal playback, you may hear the PCM or analog sound an instant before the Dolby Digital sound is played.

DIGITAL SOUND FIELD PROCESSOR (DSP) EFFECT

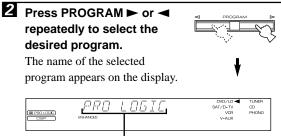

Selecting a DSP Program

You can enhance your listening experience by selecting a DSP program. Refer to pages 25 to 27 for details about each program.

On the front panel

1 Make sure that the effect speakers (center, rear, and subwoofer) are turned on.

DSP program name

On the remote control

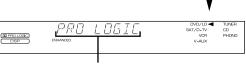

Make sure that the effect speakers (center, rear, and subwoofer) are turned on.

Press AMP(TUNER) on the component selector.

Press PRG+ or PRG– repeatedly to select the desired program. The name of the selected

program appears on the display.

DSP program name

<u>`</u>`

If desired, adjust the delay time and the sound output level of each speaker. (Refer to pages 37 and 38 for details.)

Notes

- You can select a DSP program for each of the input sources. Once you select a program, it is linked with the input source selected at that time. So, when you select the input source next time, the same program is automatically selected.
- When a monaural source is being played with PRO LOGIC/ Normal or PRO LOGIC/ENHANCED, no sound will be heard from the main speakers and the rear speakers. Sound can only be heard from the center speaker. However, if "CENTER SP" in the SET MENU is set to the NONE position, the center channel sound is output from the main speakers.
- When a source connected to the EXTERNAL DECODER INPUT terminals of this unit is selected, the digital sound field processor cannot be used.

Canceling the Sound Effect (turning off the effect speakers)

Press EFFECT to cancel the sound effect and monitor only the main sound.

sound effect back on.

Press EFFECT again to turn the

Notes

- If the sound effect is canceled when Dolby Digital or DTS is decoding, the sounds of all channels are mixed and output from the main speakers.
- If you turn off the sound effect when Dolby Digital or DTS is decoding, it may happen that the sound is output faintly or not output normally, depending on the source. In that case, turn back on the sound effect.

SOUND FIELD PROGRAM

This unit incorporates a sophisticated, multi-program digital sound field processor (DSP). This processor allows you to electronically expand and change the shape of the audio sound field from both audio and video sources, creating a theater-like experience in your listening room. You can create outstanding audio sound by selecting a suitable DSP program (this will, of course, depend on what you are listening to).

When you select a CINEMA DSP program, one of the built-in decoders (Dobly Pro Logic, Dolby Digital and DTS) is turned on according to which type of signals the source being played contains.

The following list gives you a brief description of the sound fields produced by each of the DSP programs. Keep in mind that most of these are precise digital re-creations of actual acoustic environments.

For movie or audio/video sources (Program No. 1 to No. 5: CINEMA DSP programs)

No.	PROGRAM	SL	JBPROGRAM	FEATURES
1	■/DTS SURROUND	 Input source: Output channel: DSP: [2] DOLBY DIGITA Input source: Output channel: DSP: 	ormal (PRO LOGE) Dolby Surround 2-ch Dolby Digital 4 channels 	The built-in Dolby Pro Logic decoder, Dolby Digital decoder or DTS decoder precisely reproduces the sound and effect of a source encoded with Dolby Surround, Dolby Digital or DTS. The realization of a highly efficient decoding process improves cross talk and channel separation, and makes sound positioning smoother and more precise. In this program, the digital sound field processor is not turned on.
		 [4] PRO LOGIC/EI (DPRO LOGIC) Input source: Output channel: DSP: [5] DOLBY DIGITAL (DIGITAL) Input source: Output channel: DSP: [6] DTS DIGITAL \$ (dts DSP: Input source: Output channel: DSP: Input source: Output channel: DSP: 	DSP) Dolby Surround 2-ch Dolby Digital 4 channels 1 (surround) AL/ENHANCED DSP) Dolby Digital 5.1 channels 2 (surround L, R)	This program ideally simulates the multi- surround speaker systems of the 35 mm-film movie theater. Dolby Pro Logic decoding, Dolby Digital decoding or DTS decoding and digital sound field processing are precisely performed without altering the original sound orientation. The surround effect produced by the sound field folds around the viewer naturally from the rear to the right and left and toward the screen.

SOUND FIELD PROGRAM

No.	PROGRAM	SUB	PROGRAM	FEATURES
No. 2	PROGRAM MOVIE THEATER 1	 [1] 70 mm SPECTAC (CLE DSP) Dolby Surround 2-ch Dolby Digital 3 channels 2 (presence & surround) LE DSP) Dolby Digital 5.1 channels 3 (presence & surround L, R) E (dts) DSP) DTS 5.1 channels 3 (presence & surround L, R)	FEATURES This program creates the extremely wide sound field of a movie theater. It precisely reproduces the source sound in detail, giving both the video and the sound field incredible reality. It is ideal for any kind of video source encoded with Dolby Surround, Dolby Digital or DTS (especially large-scale movie productions).
		 [4] 70 mm SCI-FI (Input source: Output channel: DSP: [5] DGTL SCI-FI (Input source: Output channel: DSP: [6] DTS SCI-FI (Input source: Output channel: DSP: Input source: Output channel: DSP: 	Dolby Surround 2-ch Dolby Digital 3 channels 2 (presence & surround) DIGITAL DSP) Dolby Digital 5.1 channels 3 (presence & surround L, R)	Clearly reproduces dialog and sound effects in the latest sound form of science fiction films, thus creating a broad and expansive cinematic space amid the silence. You can enjoy science fiction films in a virtual-space sound field that includes Dolby Surround, Dolby Digital and DTS-encoded software employing the most advanced techniques.
3	MOVIE THEATER 2	 Input source: Output channel: DSP: [2] DGTL ADVENTU (DIGITAL) Input source: Output channel: DSP: 	Dolby Surround 2-ch Dolby Digital 3 channels 2 (presence & surround)	Ideal for precisely reproducing the sound of the newest multi-track films. The sound field is made to be similar to that of the newest movie theaters, so the reverberations of the sound field itself are restrained as much as possible. The data for the sound field of an opera house are used for the front presence, so the three- dimensional feeling of the sound field is emphasized, and dialog is precisely oriented on the screen. By using the data for the sound field of a concert hall on the surround sound field, powerful reverberations are generated. You can enjoy watching action, adventure movies, etc. with strong presence.
		 [4] 70 mm GENERA Input source: Output channel: DSP: [5] DGTL GENERAL Input source: Output channel: DSP: [6] DTS GENERAL (Input source: Output channel: DSP: 	Dolby Surround 2-ch Dolby Digital 3 channels 2 (presence & surround) (DIGITAL DEP) Dolby Digital 5.1 channels 3 (presence & surround L, R)	This program is for reproducing sounds on a multi-track film, and is characterized by a soft and extensive sound field. The front presence of the sound field is relatively narrow. It spatially spreads all around and toward the screen, restraining echo effect of conversations without losing clarity. For the surround sound field, the harmony of music or chorus sounds beautifully in a wide space at the rear of the sound field.

No.		PROGRAM	FEATURES
4	MONO MOVIE Input source: Output channel: DSP: 	Monaural 1 channel 1	This program is designed specifically to enhance monaural sources. Compared to a strictly mono setting, the sound image is wider and slightly forward of the speaker pair, lending an immediacy to the overall sound. It is particularly effective for old mono movie, news broadcasts and dialog.
5	TV SPORTS • Input source: • Output channel: • DSP:	Audio/Video 2 to 5.1 channels 2 to 3 (presence & surround)	This program is furnished with a tight sound field in which the sound will not spread excessively at the front, but the rear surround produces dynamic sound expansion. It is the most suitable for sports programs.

For Hi-Fi audio sources

No.		PROGRAM	FEATURES
6	DISCOInput source:Output channel:DSP:	2-ch PCM/Analog audio 2 channels 1	This program simulates the acoustic environment of a disco in the heart of a lively city. The sound is dense and highly concentrated.
7	ROCK CONCERTInput source:Output channel:DSP:	2-ch PCM/Analog audio 2 channels 1	This program is ideally suited for rock music. You will experience a dynamic and lively sound field.
8	CONCERT HALL • Input source: • Output channel: • DSP:	2-ch PCM/Analog audio 2 channels 1	This program creates the expansive ambience of a large concert hall. It is suited for orchestra and opera music.

CINEMA DSP: Dolby Surround + DSP/Dolby Digital + DSP/DTS + DSP

■ Dolby Pro Logic + 2 digital sound fields

Digital sound fields are created in both the presence and rear surround zones of the Dolby Pro Logic-decoded sound field. They create a wide acoustic environment and emphasize the surround effect in the room, letting you feel as much presence as if you were watching a movie in a popular Dolby Stereo theater.

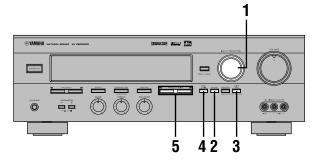

■ Dolby Digital or DTS + 3 digital sound fields

Digital sound fields are created in the presence zone and independently on the left and right surround zones of the Dolby Digital-decoded or DTS-decoded sound field. They create a wide acoustic environment and strong surround effect in the room without losing high channel separation. With the wide dynamic range of Dolby Digital or DTS sound, this sound field combination lets you feel as if you were watching a movie in the newest Dolby Digital theater or DTS-installed theater. This is the most ideal home theater sound at the present time.

TUNING

Automatic tuning is effective when station signals are strong and there is no interference. However, if the signal from the station you want to select is weak, you must tune in to it manually (manual tuning).

Automatic Tuning

Use INPUT SELECTOR to select the tuner as the input source.

2 Press FM/AM to select the reception band (FM or AM).

"FM" or "AM" appears on the display.

Press TUNING MODE so that the "AUTO" indicator lights up on the display.

Press PRESET/TUNING (EDIT) to turn ">" off.

AUTO

Lights up

Turn "ິ" off

Press PRESET/TUNING ► once to tune in to a higher frequency and ◄ once to tune in to a lower frequency.

Press the button again if the tuning search does not stop at the desired station.

Note

• If you tune in manually to an FM station, it will be automatically received in monaural mode to increase the signal quality.

`**`**∳′-

- Use the manual tuning method if the tuning search does not stop at the desired station (because the signal from the station is weak).
- When tuned in to a station, the frequency of the received station is shown on the display.

Manual Tuning

Use INPUT SELECTOR to select the tuner as the input source.

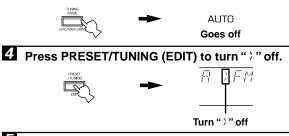

Press FM/AM to select the reception band (FM or AM).

"FM" or "AM" appears on the display.

Press TUNING MODE so that the "AUTO" indicator goes off.

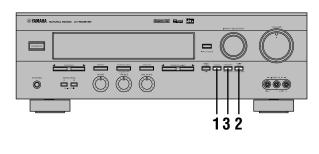

D Press PRESET/TUNING ► or ◄ to tune in to the desired station.

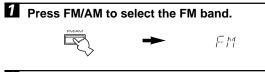

To continue the tuning search, hold down the button.

Automatic Preset Tuning (for FM stations only)

You can make use of the automatic preset tuning function for FM stations only. This function enables the unit to automatically tune in with strong signals and to sequentially store up to 40 FM stations (5 groups x 8 stations).

2 Press TUNING MODE so that the "AUTO" indicator lights up on the display.

Hold down MEMORY for about three seconds. The preset number, the "MEMORY" and "AUTO" indicators flash. After about five seconds, automatic preset tuning begins from the frequency currently displayed toward the higher frequencies.

Received stations are sequentially stored as A1, A2 ... A8. If more than 8 stations have been tuned, they are stored as preset station numbers in other groups (B, C, D and E) in that order.

Memory back-up

The memory back-up circuit prevents the stored data from being lost when this unit is set in the standby mode. If, however, the power cord is disconnected from the AC power outlet or the power is cut for more than one week, the memory will be erased. If so, store the stations again by using preset tuning methods.

Automatic preset tuning options

You can select the preset number from which the unit will store FM stations and/or begin tuning toward lower frequencies. Before automatic preset tuning begins (after pressing MEMORY in step 3),

- Press A/B/C/D/E and PRESET/TUNING to select the preset number with which the first station will be stored. The automatic preset tuning will stop when stations have all been stored up to E8.

When automatic preset tuning is completed

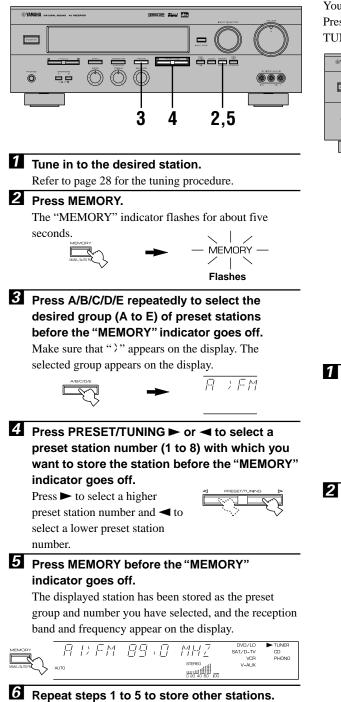

The display shows the frequency of the last preset station. Check the contents and the number of preset stations by following the procedure in the section "To Recall a Preset Station" on page 30.

Notes

- A new setting can be stored in place of the former one.
- You can manually replace a preset station with another FM or AM station by simply using the manual preset tuning method.
- Even if the number of received stations is not enough to be stored up to E8, automatic preset tuning is automatically ended after searching for all stations.
- Only FM stations with sufficient signal strength are stored by automatic preset tuning. If the station you want to store is weak in signal strength, tune in to it manually in monaural mode and store it by using the manual preset tuning method.

Manual Preset Tuning

You can also store up to 40 stations (5 groups x 8 stations) manually.

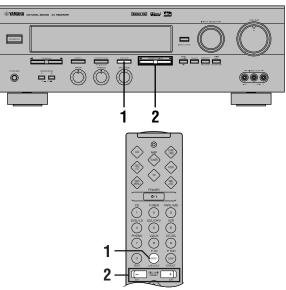

Notes

- A new setting can be stored in place of the former one.
- The reception mode (stereo or monaural) is stored along with the station frequency.

To Recall a Preset Station

You can recall any desired station simply by selecting the preset station number with which it was stored.

You can also recall a preset station with the remote control. Press AMP(TUNER) on the component selector and press TUNER on the input selector.

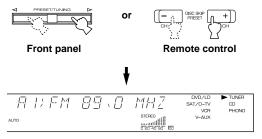

Press A/B/C/D/E to select the required group of preset stations.

Make sure that ">" appears on the display.

Press PRESET/TUNING ► or ◄ (or PRESET +/-) to select a preset station number (1 to 8).

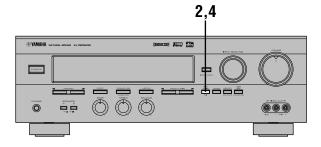

The preset group and number appear on the display along with the reception band, frequency and signal strength information.

Exchanging Preset Stations

You can exchange the assignment of two preset stations with each other.

Example: If you want to exchange preset station "E1" with "A5".

1 Recall preset station "E1".

Refer to the procedure in the section "To Recall a Preset Station" on page 30.

2 Hold down (PRESET/TUNING) EDIT for about three second.

"E1" and the "MEMORY" indicator flash.

Flashes

 3 Recall preset station "A5" by using the buttons on the front panel.

 "A5" and the "MEMORY"

indicator flash.

4 Press (PRESET/TUNING) EDIT again.

The display shows the exchange of stations has been completed.

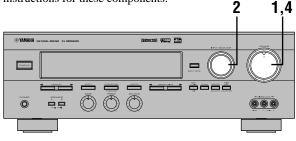

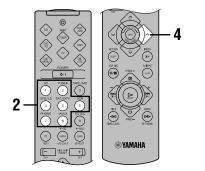

BASIC OPERATION

RECORDING A SOURCE ON TAPE, MD OR VIDEO CASSETTE

Recording adjustments and other operations are performed from the tape deck, MD recorder or VCR. Refer to the instructions for these components.

1 Set VOLUME to the " ∞ " position.

Front panel

2 Select the source you want to record.

Remote control

Begin recording by the tape deck, MD recorder or VCR connected to this unit.

4 Play the source and then turn up the volume to confirm the input source.

Front panel

Remote control

<u>`</u>`

If a tape deck or MD recorder is being used for recording, you can monitor the sounds being recorded by pressing TAPE/MD MON / EXT. DECODER (or TAPE/MD).

Notes

- The DSP program and the setting of VOLUME, BASS, TREBLE and BALANCE have no effect on the material being recorded.
- Composite video and S video signals pass independently through this unit's video circuits. Therefore, when recording or dubbing video signals, if your video source component is connected to provide only an S video (or only a composite video) signal, you can record only an S video (or only a composite video) signal by your VCR.
- A source connected to this unit only through the digital terminals cannot be recorded by the tape deck, MD recorder or VCR connected to this unit.
- A source connected to the EXTERNAL DECODER INPUT terminals of this unit cannot be recorded.
- Check the copyright laws in your country to record from records, CDs, radio, etc. Recording of copyrighted material may infringe copyright laws.

If you play back a video source that uses scrambled or encoded signals to prevent it from being dubbed, the picture itself may be disturbed due to those signals.

3

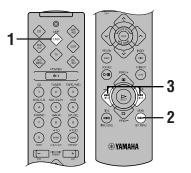

SET MENU

This unit provides you with the following items in the SET MENU to maximize the performance of your system and expand your enjoyment for audio listening and video watching.

- 1. CENTER SP
- 2. REAR SP
- 3. MAIN SP
- 4. BASS OUT
- 5. MAIN LVL
- 6. D.D. LFE
- 7. D-RANGE
- 8. DTS LFE
- 9. CNTR DELAY
- 10.MEM. GUARD
- **11.SAT INPUT**

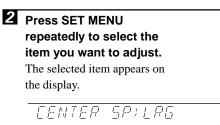

Adjusting Items in the SET MENU

Adjustments should be performed with the remote control while watching the information on the display.

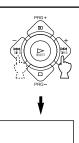

Press AMP(TUNER) on the component selector.

Press + or – repeatedly to adjust the setting.

EENTER SP>SML

Repeat steps 2 and 3 to adjust the setting of any other item in the same way.

Memory back-up

The memory back-up circuit prevents the stored data from being lost when this unit is set in the standby mode. If, however, the power cord is disconnected from the AC power outlet or the power is cut for more than one week, the settings of the SET MENU will automatically return to the preset positions and values. If so, adjust the settings of the SET MENU again.

Description of Each Item

1. CENTER SP

Choices: LRG (Large)/SML (Small)/NONE Preset position: LRG (Large)

CENTER SP>LRG

LRG (Large)

Select this position if your center speaker is approximately the same size as the main speakers. In this position, fullrange signals on the center channel are directed to the center speaker.

SML (Small)

Select this position if you use a center speaker that is smaller than the main speakers. In this position, low bass signals (below 90 Hz) on the center channel are distributed to the SUBWOOFER OUTPUT terminal (or to the right and left main speakers if "BASS OUT" is set to the MAIN position).

NONE

Select this position if you do not have a center speaker (4-speaker system). In this position, full-range signals on the center channel are directed to the right and left main speakers.

2. REAR SP

Choices: LARGE/SMALL

Preset position: LARGE

REAR SPYLARGE

LARGE

Select this position if your rear speakers have high ability for bass reproduction, or if a subwoofer is connected in parallel to the rear speaker. In this position, full-range signals on the rear channels are directed to the rear speakers.

SMALL

Select this position if your rear speakers do not have high ability for bass reproduction. In this position, low bass signals (below 90 Hz) on the rear channels are distributed to the SUBWOOFER OUTPUT terminal (or to the right and left main speakers if "BASS OUT" is set to the MAIN position).

3. MAIN SP

Choices: LARGE/SMALL Preset position: LARGE

MAIN SP>LARGE

LARGE

Select this position if your main speakers have high ability for bass reproduction. In this position, full-range signals on the main channels are directed to the right and left main speakers.

SMALL

Select this position if your main speakers do not have high ability for bass reproduction. However, if your system does not include a subwoofer, do not select this position. In this position, low bass signals (below 90 Hz) on the main channels are distributed to the SUBWOOFER OUTPUT terminal if "BASS OUT" is set to the SW or BOTH position.

4. BASS OUT

Choices: SW/MAIN/BOTH Preset position: BOTH

BASS OUT>BOTH

SW

Select this position if your system includes a subwoofer. In this position, signals on the LFE channel and other low bass signals that are distributed from other channels are directed to the SUBWOOFER OUTPUT terminal when playing a source encoded with Dobly Digital or DTS.

Note

• When playing a 2-channel source (tape, MD, CD, video cassette etc.), select the BOTH position to direct low bass signals (below 90 Hz) to the SUBWOOFER OUTPUT terminals.

MAIN

Select this position if your system does not include a subwoofer. In this position, besides full-range signals on the main channels, signals on the LFE channel and other low bass signals (below 90 Hz) that are distributed from other channels are directed to the right and left main speakers.

BOTH

Select this position if your system includes a subwoofer. In this position, signals on the LFE channel are directed to the SUBWOOFER OUTPUT terminal. Low bass signals on the main channels are directed to both the main speakers and the SUBWOOFER OUTPUT terminal.

5. MAIN LVL

Choices: NORM (Normal)/-10 dB Preset position: NORM (Normal)

MAIN LVL>NORM

NORM (Normal)

Normally select this position.

–10 dB

Select this position if the sound output from the main speakers is too loud and cannot be balanced with the sound output from the center and rear speakers. In this position, the sound output from the main speakers is attenuated.

Notes

- The setting of "CENTER SP", "REAR SP", "MAIN SP" and "BASS OUT" have no effect on a source connected to the EXTERNAL DECODER INPUT terminals on the rear of this unit.
- Once you have adjusted appropriately for "CENTER SP", "REAR SP", "MAIN SP", "BASS OUT" and "MAIN LVL", you do not have to change any settings unless your speaker system is modified.

D.D. LFE (Adjusting the output level of the LFE channel for Dolby Digital)

Control range: -20 dB to 0 dB (in 1 dB steps) Preset value: 0 dB

 \overline{I} \overline{I} \overline{I} \overline{I} \overline{FE} Π.

Note

• This adjustment is only effective when Dolby Digital is being decoded and the selected source encoded with Dolby Digital contains LFE signals.

This adjusts the output level of the LFE channel. If the LFE signals are mixed with signals of other channels and they are directed to the same speakers, the ratio of the LFE signal level to the level of the other signals can be adjusted.

7. D-RANGE (Adjusting the dynamic range)

Choices: MAX/STD (Standard)/MIN Preset position: MAX

Note

• This adjustment is only effective when Dolby Digital is being decoded.

"Dynamic range" is the difference between the maximum level and the minimum level of sounds. Sounds on a movie originally designed for movie theaters feature a very wide dynamic range. Dolby Digital technology can modify the original sound track into a home audio format with this wide dynamic range unchanged. Powerful sounds of extremely wide dynamic range are not always suitable for home use. Depending on the condition of your listening environment, it may not be possible to increase the sound output to a level as high as that in a movie theater. However, at the normal level suitable for listening in your room, the low-level parts of source sound often cannot be heard well because they will be lost among noise in your environment. Dolby Digital technology has also made it possible to reduce an original sound track's dynamic range for a home audio format by "compressing" the sound data.

MAX

In this position, a source encoded with Dolby Digital is reproduced in the original sound track's wide dynamic range to provide you with powerful sounds just like those in a movie theater. Selecting this position will be even better if you can listen to a source at a high output level in a room specially soundproofed for audio/video enjoyment.

STD (Standard)

In this position, a source encoded with Dolby Digital is reproduced in the "compressed" dynamic range of the source that is suitable for low-level listening.

MIN

In this position, the dynamic range is more reduced than in the STD position. Selecting this position will be effective when you must listen to a source at a low level.

Note

• It may happen that sound is output faintly or not output normally depending on the source. In that case, select the MAX or STD position.

8. DTS LFE (Adjusting the output level of the LFE channel for DTS)

Control range: -10 dB to +10 dB (in 1 dB steps) Preset value: 0 dB

Note

• This adjustment is effective only when DTS is being decoded and the selected source encoded with DTS contains LFE signals.

This adjusts the output level of the LFE channel. If the LFE signals are mixed with signals of other channels and they are directed to the same speakers, the ratio of the LFE signal level to the level of the other signals can be adjusted.

9. CNTR DELAY (Adjusting the delay of the center sound)

Control range: 0 ms to 5 ms (in 1 ms steps) Preset value: 0 ms

Note

• This adjustment is only effective when Dolby Digital or DTS is being decoded and the selected source encoded with Dolby Digital or DTS contains center channel signals.

This adjusts the delay between the main sound (on the main channels) and dialog, etc. (on the center channel). The larger the value, the later the dialog, etc. is generated.

This makes sounds from the left main, center and right main speakers reach your listening position at the same time. This is achieved by delaying the sound from the center speaker if the distance from the center speaker to your listening position is shorter than the distance from the right and left main speaker to your listening position.

10.MEM. GUARD (Locking the settings)

Choices: ON/OFF Preset position: OFF

If you wish to prevent accidental alterations to the settings of the SET MENU and other adjustments on this unit, select the ON position. The following settings on this unit can be locked:

- Settings of other items in the SET MENU
- Settings in the TIME/LEVEL mode
- Settings when using TEST

11.SAT INPUT (Selecting the initial input mode for a source connected to the SAT/D-TV input terminals)

Choices: AUTO/LAST Preset position: AUTO

SAT INPUT AUTO

The input mode for a source connected to the SAT/D-TV input terminals of this unit can be automatically set when the power of this unit is turned on. Refer to page 22 for details about the input mode.

AUTO

In this position, the input mode is always set to AUTO.

LAST

In this position, the input mode is automatically set to that selected the last time when the power of this unit was turned on.

DELAY TIME AND SPEAKER OUTPUT LEVELS

When using the digital sound field processor with the Dolby Pro Logic decoder, Dolby Digital decoder or DTS decoder, you can adjust the delay time between the main sound and sound effect, and each speaker's output level as you wish.

Delay Time

You can adjust the time difference between the beginning of the sound from the main speakers and the beginning of the sound effect from the rear speakers. The larger the value, the later the sound effect is generated. The delay time can be individually adjusted to all DSP programs.

Notes

- Adding too much delay will cause an unnatural effect with some sources.
- The sound is momentarily interrupted while adjusting the delay time.

	D	Control	Preset
	Program	range (ms)	value
1.	PRO LOGIC/Normal	15 to 30	20
	DOLBY DIGITAL/Normal	0 to 15	5
	DTS DIGITAL SUR/Normal	0 to 15	5
	PRO LOGIC/ENHANCED	15 to 30	20
	DOLBY DIGITAL/ENHANCED	0 to 15	5
	DTS DIGITAL SUR/ENHANCED	0 to 15	5
2.	70 mm SPECTACLE	15 to 30	23
	DGTL SPECTACLE	1 to 99	15
	DTS SPECTACLE	1 to 99	15
	70 mm SCI-FI	15 to 30	20
	DGTL SCI-FI	1 to 99	16
	DTS SCI-FI	1 to 99	16

	DTS ADVENTURE	1 to 99	15
	70 mm GENERAL	15 to 30	20
	DGTL GENERAL	1 to 99	15
	DTS GENERAL	1 to 99	15
4.	MONO MOVIE	1 to 99	49
5.	TV SPORTS	1 to 99	9
6.	DISCO	1 to 99	40
7.	ROCK CONCERT	1 to 99	16
8.	CONCERT HALL	1 to 99	44

Sound Output Level of the Center, Right Rear and Left Rear Speakers, and Subwoofer

If desired, you can adjust the sound output level of each speaker even if it has already been adjusted in

"ADJUSTING THE SPEAKER BALANCE" on pages 18 and 19.

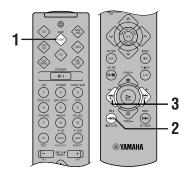

Notes

- The sound output level of the center speaker cannot be adjusted when the input signal is analog, PCM audio, or encoded with Dolby Digital in 2-channel.
- If "CENTER SP" in the SET MENU is set to the NONE position, the sound output level of the center speaker cannot be adjusted. This is because the center channel sound is automatically output from the right and left main speakers.
- Once the sound output level has been adjusted, the level will be the same for all DSP programs.

Speaker	Control range (dB)	Preset value
Center	-20 to +10	0
Right rear	-20 to +10	0
Left rear	-20 to +10	0
Subwoofer	-20 to 0	0

Adjusting Method

Adjustments should be performed with the remote control while watching the information on the display.

1 Press AMP(TUNER) on the component selector.

Each time you press TIME/LEVEL, the selected item changes and appears on the display as below.

->	DELAY
	•
	CENTER
	+
	R SUR.
	•
	L SUR.
	•
	SWFR

Note

• Depending on the setting of the SET MENU, you may not be able to select all these items.

Press + or – to adjust the delay time or speaker output levels.

Repeat steps 2 and 3 to adjust the settings of any other item.

Memory back-up

The memory back-up circuit prevents the stored data from being lost when this unit is set in the standby mode. If, however, the power cord is disconnected from the AC power outlet or the power is cut for more than one week, the latest values for the delay time and the center/rear/ subwoofer output levels that were set will automatically return to the preset values. If so, adjust the delay time and output levels again.

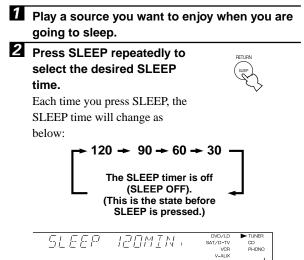

SLEEP TIMER

The SLEEP timer can be used to automatically set this unit in the standby mode. This timer is useful when you are going to sleep while enjoying a broadcast or other desired input source. The SLEEP timer can only be set with the remote control.

Notes

- First press AMP(TUNER), TAPE/MD, CD or DVD/LD on the component selector to set the SLEEP timer for this unit.
- The SLEEP timer is effective for the components connected to the AC OUTLET(S) on the rear panel of this unit.

Setting the SLEEP Timer

The "SLEEP" indicator soon lights up on the display after the SLEEP timer has been set.

The display returns to the previous indication.

Flashes

Canceling the Selected SLEEP Timer

Press SLEEP repeatedly until "SLEEP OFF" appears on the display.

It will soon disappear and the "SLEEP" indicator will go off.

Note

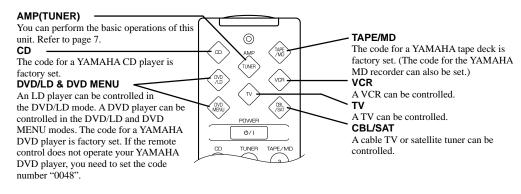

• The SLEEP timer can also be canceled by setting the unit in the standby mode by using POWER on the remote control (or STANDBY/ON), or by disconnecting the AC power cord from the AC power outlet.

PRESET REMOTE CONTROL

The provided remote control is factory set to control not only this unit but also most YAMAHA audio components connected to it.

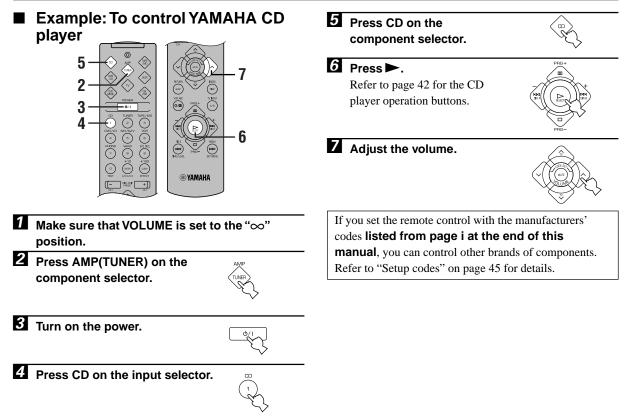

There are eight component selector buttons. Press one of these buttons which corresponds to the component you want to control with the remote control. For example, if you press CD on the component selector, the remote control is set to the CD operation mode, allowing the CD player to be controlled by the buttons on the remote control.

Note

• The button functions on the remote control differ depending on the operation mode. Refer to the following pages for details.

Controlling the Components Connected to This Unit

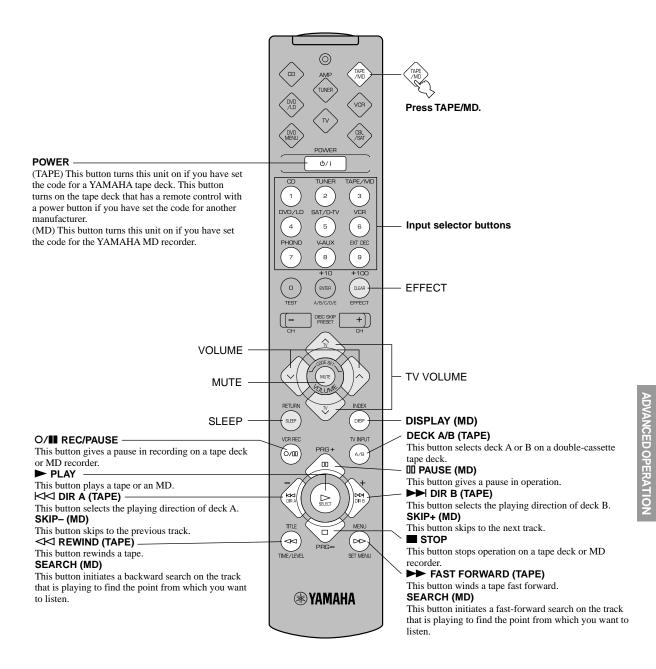

Description of Each Mode

Advanced Information

Setup codes

You can set the code for the manufacturer of your component after pressing the component selector buttons other than AMP(TUNER).

remote control to check if you have set the code correctly.

If your component cannot be controlled with the remote control, try setting another code for the same manufacturer.

Notes

- You can set only one code for one mode.
- In the DVD/LD and DVD MENU modes:
 - Be sure to press DVD/LD on the component selector before entering the code for the DVD/LD player. The code set in the DVD/LD mode is also simultaneously set in the DVD MENU mode. You cannot set the code for a DVD player after pressing DVD MENU on the component selector.
 - DVD MENU operations cannot be performed for some DVD players.
- A second (and third) VCR can be controlled. Refer to "To use a second (and third) VCR" for details.
- · If your component does not respond to any of the codes listed for the manufacturer, use the original remote control supplied with your component.

You can control a second (and third) VCR in the CBL/SAT and DVD MENU modes if a cable TV or satellite tuner, or DVD player is not being used.

Note

- If you want to control a second (and third) VCR in the DVD MENU mode, you must set the code for an LD player in the

If the VCR cannot be controlled with the remote control, try setting another code for the same manufacturer.

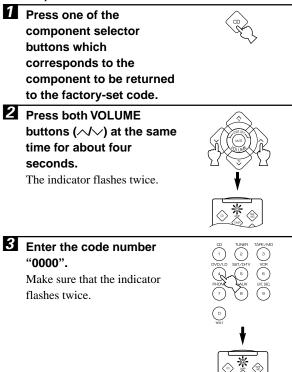

Returning to the factory-set codes

To return all components to the factory-set codes, follow these steps.

Press one of the component selector buttons other than AMP(TUNER). Press both VOLUME buttons (~/~) at the same time for about four seconds. The indicator flashes twice. Enter the code number "9990". Make sure that the indicator flashes twice. Enter that the indicator flashes twice.

To return each component to the factory-set codes, follow these steps.

The following codes are factory set.

Component selector button	Component	Code
TV	TV	0101
CBL/SAT	Satellite tuner	0006
VCR	VCR	0002
DVD/LD	DVD player	0008 (YAMAHA DVD player)
CD	CD player	0005 (YAMAHA CD player)
TAPE/MD	Tape deck	0004 (YAMAHA Tape deck)

We recommend that you write all the code numbers you have set on the "Quick Reference Card".

TROUBLESHOOTING

If the unit fails to operate normally, check the following points to determine whether the fault can be corrected by the simple measures suggested. If it cannot be corrected, or if the fault is not listed in the SYMPTOM column, disconnect the power cord and contact your authorized YAMAHA dealer or service center.

General

SYMPTOM	CAUSE	REMEDY	Refer to page
The unit fails to turn on when STANDBY/ON is pressed, or enters in the standby mode soon after the power has been turned on.	The power cord is not connected or the plug is not completely inserted.	Firmly connect the power cord.	17
	The IMPEDANCE SELECTOR switch on the rear panel is not fully set to the right or left position.	Set the switch fully to the right or left position when the unit is in the standby mode.	17
The unit does not work normally.	The internal microcomputer has been frozen by an external electric shock (lightning, excessive static electricity, etc.) or by a power supply with low voltage.	Set the unit in the standby mode and disconnect the AC power cord from the AC power outlet. After about 30 seconds have passed, connect the power and operate the unit again.	_
No sound and/or no picture.	Incorrect input or output cable connections.	Connect the cables properly. If the problem persists, the cables may be defective.	12, 13
	An appropriate input source has not been selected.	Select an appropriate input source with INPUT SELECTOR or TAPE/MD MON / EXT. DECODER (or the input selector buttons).	20
	The speaker connections are not secure.	Secure the connections.	15
	SPEAKERS have not been set properly.	Set SPEAKERS corresponding to the speakers in use to the ON position.	20
	The sound is muted.	Set VOLUME to the "∞" position, press MUTE to cancel a mute and adjust the volume.	21
	Digital signals other than PCM audio and the signals encoded with Dolby Digital or DTS which this unit cannot reproduce are being input to this unit by a CD-ROM, etc.	Play a source whose signals this unit can reproduce.	_
No picture.	There is no S VIDEO connection between this unit and the TV monitor, although S video signals are being input to this unit.	Connect the monitor's "S" video input terminal to this unit's S VIDEO MONITOR OUT terminal.	14
The sound suddenly goes off.	The protection circuit has been activated because of a short circuit, etc.	Set the unit in the standby mode and then turn on to reset the protection circuit.	_
	The SLEEP timer has functioned.	Turn on the power, and play the source again.	39
Only the speaker on one side can be heard.	Incorrect cable connections.	Connect the cables properly. If the problem persists, the cables may be defective.	15
	Incorrect setting of BALANCE.	Adjust it to the appropriate position.	21
No sound from the effect	The sound effect is off.	Press EFFECT to turn it on.	24
speakers.	A Dolby Surround, Dolby Digital or DTS decoding DSP program is being used with material not encoded with Dolby Surround, Dolby Digital or DTS.	Select another DSP program.	27
No sound from the center speaker.	The sound output level of the center speaker is set to minimum.	Raise the level of the center speaker.	37
	"CENTER SP" in the SET MENU is set to the NONE position.	Select the LRG or SML position.	34
	Incorrect DSP program is selected.	Select the appropriate program.	25, 26, 27
	The source encoded with Dolby Digital or DTS does not have a center channel signal.		
No sound from the rear speakers.	The output level of the rear speakers is set to minimum.	Raise the output level of the rear speakers.	37
	A monaural source is being played with the PRO LOGIC/Normal or PRO LOGIC/ENHANCED program.	Select another DSP program suitable for the monaural source.	27

APPENDIX

English

TROUBLESHOOTING

SYMPTOM	CAUSE	REMEDY	Refer to page
No sound from the subwoofer.	"BASS OUT" in the SET MENU is set to the SW or MAIN position when playing a 2-channel source.	Select the BOTH position.	34
	The source does not contain low bass signals (below 90 Hz).		
A "humming" sound can be heard.	Incorrect cable connections.	Firmly connect the audio plugs. If the problem persists, the cables may be defective.	12, 13
	No connection from the turntable to the GND terminal.	Make the GND connection between the turntable and this unit.	12
The volume level is low while playing a record.	The record is being played on a turntable with an MC cartridge.	The turntable should be connected to the unit through the MC head amplifier.	12
The volume level cannot be increased, or the sound is distorted.	The component connected to the TAPE/MD OUT (REC) terminals of this unit is in the standby mode.	Turn on the power to the component.	_
The sound effect cannot be recorded.	It is not possible to record the sound effect by a tape deck or MD recorder connected to the TAPE/MD OUT (REC) terminals of this unit.		32
The DVD/LD, TV/digital TV or satellite tuner source cannot be recorded by tape deck, MD recorder or VCR connected to this unit.	The DVD/LD player, TV/digital TV or satellite tuner is connected to the unit only through the digital terminals.	Make additional connections between the analog terminals.	13
Adjusting this unit by using SET MENU, TIME/ LEVEL or TEST cannot be performed.	"MEM. GUARD" in the SET MENU is set to the ON position.	Set "MEM. GUARD" to the OFF position.	36

■ Tuner

	SYMPTOM	CAUSE	REMEDY	Refer to page
	FM stereo reception is noisy.	The characteristics of FM stereo broadcasts may cause this problem when the transmitter is too far away or the antenna input is poor.	Check the antenna connections. Try using a high-quality directional FM antenna. Use the manual tuning method.	10, 28
FM	There is distortion, and clear reception cannot be obtained even with a good FM antenna.	There is multipath interference.	Adjust the antenna position to eliminate multipath interference.	10
	The desired station cannot be tuned in with the automatic tuning method.	The station is too weak.	Use the manual tuning method. Use a high-quality directional FM antenna.	10, 28
	Previously preset stations can no longer be tuned in.	The unit has been disconnected for a long period.	Re-store the stations.	29
	The desired station cannot be tuned in with the automatic tuning method.	The signal is weak or the antenna connections are loose.	Tighten the AM loop antenna connections and orient it for best reception. Use the manual tuning method.	11, 28
АМ	There are continuous crackling and hissing noises.	Noises result from lightning, fluorescent lamps, motors, thermostats and other electrical equipment.	Use an outdoor antenna and a ground wire. This will help somewhat, but it is difficult to eliminate all noise.	11
	There are buzzing and whining noises (especially in the evening).	A TV set is being used nearby.	Move this unit away from the TV.	_

Remote control

SYMPTOM	CAUSE	REMEDY	Refer to page
The remote control does not work.	Direct sunlight or lighting (from an inverter type of fluorescent lamp, etc.) is striking the remote control sensor of this unit.	Reposition the unit.	3
	The batteries are weak.	Replace all batteries with new ones.	2
The unit or other component cannot be controlled.	The component to be controlled has not been selected.	Press one of the component selector buttons which corresponds to the component to be controlled.	40
	The manufacturer's code has not been set	Enter the code again.	45
	properly.	Try setting another code for the same manufacturer.	

Others

SYMPTOM	CAUSE	REMEDY	Refer to page
The sound is degraded when listening with headphones to a tape deck or CD player connected to this unit.	This unit is in the standby mode.	Turn on the power of the unit.	
There is noise interference from digital or high-frequency equipment, or the unit.	The unit is too close to the digital or high- frequency equipment.	Move the unit further away from such equipment.	_

When playing back a source encoded with DTS

SYMPTOM	CAUSE	REMEDY	Refer to page
A loud hissing noise is heard when playing back a source encoded with	The player which plays back the source is not connected to a digital audio signal input terminal of this unit.	The player must be connected to a digital audio signal input terminal of this unit besides the analog audio signal terminal connections.	13
DTS.	The input mode is set to ANALOG on this unit.	Set a proper input mode to turn on the built-in DTS decoder.	22
A percussive noise is heard when playing back a source encoded with DTS.	If the input mode is set to AUTO, depending on some sources, there may be a noise heard while this unit is identifying the format of the input signal.	Set the input mode of the currently selected input source to DTS.	22
No sound is heard when playing back a source encoded with DTS, even if the input mode is set to AUTO on this unit.	The built-in DTS decoder does not function because the player has a digital volume control and it is set at a position other than "maximum," "neutral" or "ineffective."	Set the player's digital volume control at the maximum, neutral or ineffective position.	_
No sound is heard when playing back an MD or DAT on which has been recorded a source encoded with DTS.	A source encoded with DTS cannot be recorded on an MD or DAT.		_
No sound is heard when playing back a source (CD, etc.) even if the currently selected input mode is AUTO.	In the AUTO mode, the DTS-decoding mode cannot be automatically changed to the normal (PCM) digital signal input mode.	Set the input mode to AUTO again.	23

Notes

• It is necessary to use a DTS decoder to play back a source encoded with DTS, so the player which plays back the source must be connected to a digital audio input terminal of this unit in the way described in this manual. If this connection is not made or only a D-to-A converter is being used without using a DTS decoder, only a loud hissing noise will be heard when you play back the source.

• If you make a search (or skip, etc.) operation while playing back a source encoded with DTS, the "dts" indicator goes off. This is because this unit automatically changes the DTS-decoding mode to the standard (PCM) digital signal input mode to prevent a noise from being output.

GLOSSARY

Dolby Surround

Dolby Surround uses four discrete channels and five speakers to reproduce realistic and dynamic sound effects: two main channels (left and right), a center channel for dialog, and a rear channel for special sound effects. The rear channel reproduces sound within a narrow frequency range. Most video tapes and laser discs include Dolby Surround encoding, as do many TV and cable broadcasts. The Dolby Pro Logic decoder built into this unit employs a digital signal processing system that stabilizes each channel for even more accurate sound positioning than is available with standard analog processors.

Dolby Digital

Dolby Digital is a digital surround sound system that provides completely independent multi-channel audio to you. Dolby Digital provides five full-range channels in what is sometimes referred to as a "3/2" configuration: three front channels (left, center and right), and two surround channels. A sixth bass-only effect channel is also provided for output of LFE (low frequency effect), or low bass effects that are independent of other channels. (This is called the "LFE channel".) This channel is counted as 0.1, thus giving rise to the term 5.1 channels in total.

The wide dynamic range of sound reproduced by the five full-range channels and precise sound orientation by digital sound processing provides listeners with excitement and realism that have never been experienced before.

DTS (Digital Theater System) Digital Surround

DTS was developed to replace analog soundtracks of movies with six discrete channels of digital soundtracks, and it is now installed in many theaters around the world. The DTS digital playback system changed the way we experienced movies in theaters with six discrete channels of superb digital audio.

DTS technology, through intense research and development has made it possible to deliver similar encode/decode discrete technology to home audio surround-sound entertainment.

DTS Digital Surround is an encode/decode system which delivers six channels of master-quality, 20-bit audio; technically, it is 5.1 channels, which means 5 full-range (left, center, right and two surround) channels, plus a subwoofer (LFE) channel (as "0.1"). It is compatible with the 5.1 speaker configurations that are currently available for home theater systems.

CINEMA DSP

The Dolby Surround and Dolby Digital sound and DTS systems show their full ability in a large movie theater, because movie sounds are originally designed to be reproduced in a large movie theater that uses a multitude of speakers. Trying to create a sound environment similar to that of a movie theater in your home is difficult because of the room size, material inside the walls, the number of speakers, and so on. In other words, your listening room is very different from a movie theater.

However, YAMAHA DSP technology allows you to create nearly the same sound experience as that of a large movie theater in your home by compensating for the lack of presence and dynamics in the listening room with original digital sound fields combined with Dolby Surround, Dolby Digital or DTS Digital Surround sounds.

The YAMAHA "CINEMA DSP" logo indicates those programs that are created by the combination of YAMAHA DSP technology and Dolby Surround, Dolby Digital or DTS.

LFE 0.1 Channel

This channel is for reproduction of low bass signals. The frequency range for this channel is 20 Hz to 120 Hz. This channel is called the channel 0.1 because it only reproduces a low frequency range compared to the full-range from 20 Hz to 20 kHz that is reproduced by the 5 channels in a Dolby Digital or DTS 5.1 channel system.

S VIDEO Signal

The S VIDEO signal is separated and transmitted as the Y signal which indicates the luminance and the C signal which indicates the chroma of the video signal (composite signal). Using the S VIDEO terminal eliminates video signal transmission loss and allows recording and playback of even more beautiful images.
