Limitations on the Clavinova when using the File Utility

The accessory CD-ROM contains a File Utility program. By using this software, you can transfer files between the internal memory or floppy disk of the Clavinova and your computer, and edit them. There are some operating states of the Clavinova in which it is not possible to use the File Utility or in which some File Utility functions are not available.

The following operations cannot be performed on the Clavinova.

- Changing the name of a protected song (“Protected” song data includes commercially available songs that have been copied to the USER drive.)
- Copying a file within the same folder
- Transmitting a protected song to the computer
- Transmitting path information to a device
- Accessing the Preset drive

You cannot use File Utility to perform file operations of the Clavinova while the Clavinova is in one of the following conditions.

- Demo mode
- Factory Reset execution

NOTE

- When transferring a file between the Clavinova and your computer, you must set the type of characters on your Clavinova to match the language of the operating system for the computer in which you installed File Utility. If the character code of the Clavinova does not match the language of the computer that is running File Utility, the file may not be handled correctly.
- On the Clavinova, the File Utility ID is fixed at “1”. If you specify an ID other than “1,” you will be unable to transmit or receive data. For details on the File Utility ID, refer to the File Utility PDF manual.

CD-ROM Installation Procedure

The following steps are the same for both Windows and Macintosh.

1 Verify that your system meets the operating requirements of the software (File Utility, driver, etc.)
See the Minimum System Requirements.

2 Connect the Clavinova to your computer.
Refer to the owner's manual for details on connections.

NOTE

- Depending on the computer system you are using, some types of connections may not be possible.
